# Two found guilty in hackers trial

### SPECIAL SUPPLEMENT

### COMMODORE

- Microprose master of simulations (see above)
- Word processing packages compared
- 80-column displays made easier
- Commodore show a preview

- Prestel hackers found guilty of lorgery
- Details of how they broke into the system

### Both intend to appeal

Full details below and inside HACKERS trial defendants Robert Schifreen and Steve Gold were both found guilty of forgery last week, and were fined £750 and £600 respectively. They were also ordered to pay £1,000 costs each.

The two had been charged under the 1981 Counterfeiting AcI after a series of Prestel security breaches between November 1984 and February 1985. Schifreen himself admitted to breaking into the Duke of Edinburgh's mail box.

The method the two used to gain access to the system revealed text-book lapses til security on Prestel's part. The

### Popular Computing Weekly. Tel: 01-437 4343.

How to submit articles Articles which are submitted for publication should not be more than 2000 words long. The articles, and any accompanying programs, should be original. It is breaking the law of copyright to copy programs out of other magazines and submit them here —so please do not be tempted. We cannot guarantee to return your programs —so please do not search your only copy. Accuracy Popular Computing Weekly cannot accept any responsibility for any errors in programs we publish, although we will always try our best to make sure programs work.

# QL rebirth for ZX Microfair?

AN announcement on the attempted buy-out of rights to the QL is expected to be made by the time of next week's ZX Microfair.

Leon Heller, chairman of Quanta, the QL user group, told Popular Computing Weekly he knew the details of the bid by a consortium of QL support companies (see Popular Computing Weekly, April 17), but he was unwilling to reveal them. He did however feel that Amstrad would be willing to sell the rights, and suggested that the upshot of the deal would be the long-awaited QL

2, with a full 68000 processor, 512-640K Ram and an internal 3½ inch disc drive.

Add-on supplier Micro Peripherals has also been spoken of as a possible buyer for the QL, but spokesman ian Donaldson dismissed the suggestion. "We're not a micro manufacturer", he said, "we're a supplier of add-ons." He said he'd walcome any takeover of the QL, but felt that any company doing so would have to be "very, very big."

Meanwhile dealers are reporting difficulty in obtaining stocks of all Sinclair products.

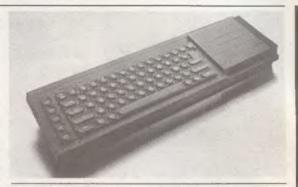

COMPUTER consultancy Interlex is now providing a technical support section on Micronet, starting at page 800900#. The new service is open to all Micronet users, and although it's aimed mainly at business subscribers should be able to answer interfacing and software queries for Amstrad PCW, Atari ST, AMiga, Apricot, IBM and IBM compatible machines.

Interiex is also offering Micronel users access to its telephone hotline query service for £25 a quarter rather than the normal £35.

Micronet itself has recently introduced high resolution graphics for BBC subscribers. These, says Micronet, are "photo quality", (see below), and can be accessed by using special software downloadable from the Net. The BBC service is currently experimental, and if successful will be extended to other micros.

# Two found guilty in hackers test case

Continued from page 1

court was told how the two had accidentally discovered telephone numbers for private Prestel computers. Schifreen then typed in a line of twos, and was asked for a four digit password. By typing 1234 at this point, he discovered a testing facility which gave him access in all Prestel boxes.

The security lapses had actually been reported to Prestel by Schifreen on October 23 1984, but this seems to have cut little ice with Prestel or the court. Wire taps installed after this date showed that Schifreen and Gold were still accessing the system, and the prosecution went ahead.

The discovery of the breaches last year caused a storm, and forced Prestel to tighten up its security. The mechanism used in prosecute hinged on the jury accepting that the two were guilty of "forging a computer disc" recording information from Prestel's computers.

The 1981 Act was used because there is no specific legislation covering hacking, and the trial has therefore been something of a test case.

Schifreen and Gold, who regard themselves as having done Prestel a service by uncovering the security lapses, are understandably bitter at the verdict, and intend to appeal Steve Porter, solicitor for Schifreen, says they will be appealing against both conviction and sentencing Grounds against conviction will be based an "legal technical arguments" which will be discussed over the next few weeks.

Prestel itself hasn't emerged unscathed. Subscribers whose tiles have been tampered with, the court was told, are now able to sue the system operator for damages under the Data Protection Act. This provision is backdaled to cover breaches from September 12 1984 onwards.

### Nemo educational robot is planned

NOLAN BUSHNELL, tounder of Atari, and Steve Wozniak, cofounder of Apple, are is team
up the produce a new educational toy called Nemo. Wozniak's
company, CL9 Inc is currently
developing a remote control
device, while Bushnell's Axion
Inc produces the Petster range
of robot pets. CL9 is to be
merged into Axion, with
Wozniak and Bushnell becoming joint chairmen.

It's not clear what Nemo will be, but it's likely to be related to the Bushnell's robot pets. These were developed because Bushnell feels that, although it Isn't currently possible to produce robots that operate on a human level, animal simulations are possible. The Petster range therefore consists of battery powered dops and cats.

### Amstrad show date

Amstrad watchers may have been confused by our story last week on the Amstrad PC. The Amstrad show organisers have rescheduled it to June 13-15. So our story "Amstrad's PC look set for May launch should have read "Amstrad's PC may launch in June." Knuckles have been July rapped

### The joystick to revive Revs

MEEDMORE has come to the rescue of owners of Firebird's Revs on the 64 with its new Hotshot Revs Special analogue joystick. The stick is switchable between proportional noncentring action, allowing variable acceleration on stick forward and controlled braking on stick back, and conventional Commodore analogue use. It retails for £12.95.

Details from Meedmore, 28 Farriers Way, Netherton, Merseyside L30 4XL (051 521 2202)

### Pilgrim tathered

CRL is launch Pilgrim, a text adventure for the Commodore

64, in the end of this month. The game revolves around a search for the legendary Guardian, the only one who can save the land of Meridian from destruction at the hands of the Silvian invaders. An everyday story of impending apocalypse for £7.95.

Details from CRL, II Kings Yard, Carpenter Road, London

P-80 pair join Epson's budget printer range

EPSON is bidding for the low cost printer market with the P-IIII range. The two basic models, the P-80 and P-80X, are light and include rechargeable batteries for remote use. Like the Brother HR5 they can use thermal paper or carbon ribbon to produce an image on paper.

Both printers offer emphasized, enlarged, condensed and underlined styles, and the P-80X also includes superscript, subscript and seven bit-image graphics modes. The P-80 has two bit image modes.

The P-80 is £160, while the P-80X iii £250

### Commodore 64 gets a cartridge Eprommer

EPILOG-1 is an Eprom system for the Commodore 64 and 128, and costs £144.95. It consists of a programmer unit, a mains powered UV eraser, an operating system cartridge and one 8K programmable cartridge. Extra cartridges cost £17.95 each, or £44.95 for three.

Details from Sircal Instruments, 11 Southfields Court, Sutton Common Road, Sutton, Surrey SM1 3HJ, (01-644 0981).

### Locoscript extras with Amstrad discs

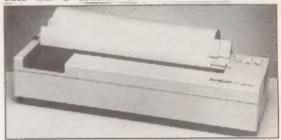

Ht-TECH Business Systems is selling 3 inch Amstrad PCW discs with a selection of Locoscript templates installed on them. The discs cost £45.

Details from Hi-Tech Business Systems, St Peter's House, Gower Street, Derby DE1 1SB (0332 381657).

### **Education from Willow**

WILLOW Software is the release two new educational programs for the BBC, Electron and Amstrad 464 and 6128. Early Words is Intended to teach three to six year olds, while Early Maths provides four to eight year olds with training in basic arithmetic. The programs cost 27.95 for tape, 29.95 for BBC disc and £12.95 for Amstrad.

Details from Willow Soltware, (0934 834056).

How would you like the chance to work on

We're looking for a

### **TECHNICAL EDITOR**

To organise our programming pages, deal with reader inquiries, and contribute to the hardware sections of the magazine.

We're looking for someone with a wide knowledge of computers and programming, particularly on Spectrum, Commodore and Amstrad machines, with the ability to write lively articles on a weekly basis.

We can offer you m young, friendly - but hectic working atmosphere in return.

No previous magazine experience in necessary, and salary in negotiable.

Please apply in writing to Christina Erskine, Editor, Popular Computing Weekly, 12-13 Little Newport Street, London WC2 7PP.

### What price a QL?

A mstrad's pricing policy is beginning to make the old Sinctair look like Acorn. Sinctair sold the Ot. for £199. Some shops managed to sell it for £145. Once a computer has been developed and proven, it can be a licence to print money.

Here are my conservative guesses as what it would cost in push the OL in a manner that Sinclair Research never did.

Prices for complete systems (components)

Price ltem Monitor (colour) €100 QL Printer €100 OL £100 Disc Interface 650 Disc Drive €50 10 Discs 25 512K Ram Pack 250

Those are my prices inflated to account for the usual overheads incurred in retailing micros.

### Business package

Cofour Monitor
QL Printer
QL and Eldersoft's ICE
Disc drive and interface
10 Discs – one with Psion
Xchange on it.
Total = £430
Home user Package
Colour Monitor

OL. Disc + Interface + 10 discs A Book on Psion Xchange A Game

Total = £325

Similar packages for hobbyists and games players might cost,

"It bit Sir Kelth Joseph."

on my estimates, £245 and £230 respectively. I think these kinds of packages could mop up the competition.

Now comes the reason why Alan Sugar would not dream of offering these kind of options. He has his own problems. The 464 and PCW8256 are in less demand then the 6128 and PCW8256. The 484 and 8256 are not immortal but third party manufacturers will offer upgrades for the machines so that they are in line with the 6128 and 8256. Phasing out those models should be relatively easy with customers able to upgrade.

Atari and Commodore will be more than ready for Christmas, they sell expensive computers, which are nevertheless a potential and real threat.

Business purchasers will see an Amiga or 520ST with a user friendly desktop sitting next to an Amstrad with alther a power up message or a game running. Possibly next to the Amstrad will be a QL with ICE. Not as chic as the American micros but with a more fashionable price tag. Draw your own conclusions.

The QL has been, literally, in suspended animation for the past year. When all the fun and games went out of finding bugs there was mostly silence. The QL has a substantial user base, the right kind of software and has long since repaid its development costs. When was it last advertised?

I R Bruntlett Coleraine A I BT51 3LA

### First service

would like to write and tell you about an exceptional place of service I have just received from Arnor.

I bought Promerge Plus on Rom, having been using Prolex! — also on Rom — for some time, with a KDS 8-bit printer port interface. I was very happy indeed with this combination, which involves a program which sets up the Interface and sets the screen attributes the way I want them, then calls Protext.

When I fired up with Promerge Plus, everything I tried worked beautifully, except that all the printer would produce was garbage.

I called Arnor, and spoke iii a programmer there. Gavin Ebury. Over the phone I read him the KDS set-up program; by the afternoon, he called me back with an amended pro-

gram. I worked first pop, perfectly.

I think this was wonderful service to an ordinary customer

Peter Ceresole London SW14

### Oxford blues

purchased a Pascal language disc from Oxford Computer Systems. On trying this disc I could not get if the compile. I returned the disc to Limbic Systems UK at the same address as OCS. With the disc I enclosed £15 for a back-up disc.

That was January 11. On February 11 I sent a letter, but I have had no reply.

The disc was to be used for Open University homework, the lack of it means that I have to Iravet to a computer centre to try a program — about 25 miles by rail.

William McGill 50 William St Helensburgh Dunbartonshire

Unfortunately Oxford Computer Systems is now in receivership, which could explain why you have not had any reply.

There are, however, other Pascal programs available for the Commodore 84. You could make inquiries about Orpheus's Pascal 84 (£24.95 on tape), or First Publishing's Pascal 64 (£34.95 on disc). Orpheus's phone number is 0767 51481, First Publishing is on 07357 5244.

### Puzzle

### Puzzle No 206

When Mrs Hex took delivery of a new china dinner service, her husband, Professor Otto Hex, was considerably more interested ill the box in which it had been mailed.

"This is curious", he mused, "the number of cuble inches which make up the volume is exactly three times the number at square inches which make up its surface."

The box was a cube with each side eighteen inches in length, and so the Professor was quite correct as the volume in cubic inches (5832) was three times the area in square inches (1944).

This set the Professor is wondering if there were any other examples, again with each dimension an exact number of inches, but this time with all three dimensions different.

What is the smallest box with this property?

### Solution to Puzzle No 201

The books were originally arranged 5.3.4.6 on the top shell and 1.7.8.2 on the bottom. The

10 FOR FREE TO 3
20 FIRE BAY TO 3 IN
20 FIRE BAY TO 3
20 FIRE BA

fraction so formed, 5348/1782, is exactly 3.
We are required to arrange the digits 1 to 8 into a numerator and denominator (four digits in each), such that the fraction so formed is

equivalent to 3. The program computes all possible denominators such that all four digits are different. Also, the left hand digit can only be 1 or 2 as these are the only values which can give a numerator in the required range.

Once the denominator is evaluated, it is multiplied by 3 to find a possible numerator. Finally, all eight digits are tested to ensure that there is no duplication of digits. There are four possible values printed out, but the problem stated that none of the volumes was in its original position. Therefore all but one of these solutions can be eliminated as in each of these cases at least one of the volumes occupies its correct position.

### Winner of Puzzie No 201

The winner is W H Roberts of Penprisk, Mid Giamorgan, who will be receiving £10.

### Rules

The closing date for puzzle 206 is May 27.

IREL the 3D arcade challenge for the thinking player. Seventy mind stretching screens, each one more complex than the previous, but providing its own individual challenge. Obvious or obscure - can you get through before your time or stamina runs out? Can you find the transporter networks. snatch the energy supplies and defuse the bombs before you are blown up (or sucked into oblivion)? Can you avoid the lurking terrors, conquer invisible obstacles and immovable barriers?

### It's all here in KIREL – one of the new generation of games from Addictive – PRICE £8.95 for the SPECTRUM.

### Letters

### Give us a clue

would like to make an appeal through the pages of your magazine, to the writers of computer program instruction manuals.

I have recently purchased Superfile and Tasprint, and I find that the manuals supplied with both programs assume that the person reading it understands computer jargon, and in conversant with such things as machine code and Ramtop! I for one am not familfar with either of these subjects, and so find that both programs are unusable, as I cannot get either of them to print out to my Brother HR-5 printer.

Masterlile is another program let down by its manual; however, I have managed to lathom this one out with some assistance from a friend.

I have written to both of the companies concerned, and am should send an SAE and 50p(to now waiting for a reply. But why should I have to write? There is no hint given in the advertisements for these programs that some programming knowledge is required. All manuals, regardless of what

they are for, should be written as simply as possible. Surely the author should assume that the reader has not got a clue. and start from there.

> CWEM (O) A W Lewsey Helensburgh Dunbartonshire

### Goonie's guide

thought that some oil your readers who own a Commodore 64 and are puzzled by some of the problems within US Gold's Goonies game might like to know that a hint/instruction guide is now available.

It is a 12-page booklet, and thus too big to run on the letters page. Although it is not an encyclopaedia of every detail of the game, the lips will help you gain the game objective without giving everything

Anyone wanting the guide cover printing costs) to the address below

### REWARDING OPPORTUNITIES WITH MIKRO-GEN

Following Mikro-Gen's move to new premises we now require additional staff. If you believe your programming ability meets our high standard, please contact us by telephone or letter to the address below.

We also require finished programmes. Top payment or royalties given to software of suitable quality.

Mikro-Gen, Unit 15. The Western Centre, Western Road. Bracknell, Berks. RG12 1RW. Telephone number (0344) 427317

### **Touchmaster Competition Winners**

The quality of many of the entries to our Touchmaster graphics competition was so high, we reckoned you should see for yourselves what can be done with a micro and some imagination

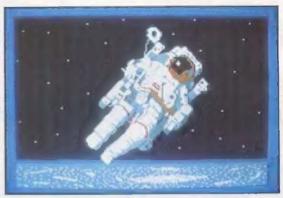

It's a shame we only had live Touchmaster graphics tablets to give away, since far more than five of our entries were deserving of recognition. Just selecting a shortlist gave the *Popular* office any number of headaches.

In the issue dated March 20, in conjunction with our special feature on graphics, we asked you in send in a work of art, any work of art, created with any graphics package – or none at all. Anything; so long as it had not been published elsewhere previously.

The response was overwhelming. Having waded through the pictures, we eventually agreed on nine masterpieces, shown on these pages, which were worthy of at least a prestigious *Popular* honour-

able mention.

After more heated argument, we whittled it down to the five prize winners. who will each receive a Touchmaster graphics tablet for their machine. The Touchmaster tablet is a pressure sensitive pad, operated by a plastic stylus, It enables you III create pictures on-screen using the stylus, and manufacturer produces

Touchware, packages designed to help you get the best from the tablet.

### The winners

First (in no particular order) to Simon Nicot of Hove in Sussex, for *The Swan*. Simon Nicol used an 'inhouse' (his own?) utility to create the picture.

Next to join the prizewinners is lain Murray, of Dunfermine in Fife, who managed is make outer space as colourful as possible with Bruce McCandless. Tony Hart's Art Master helped in the produc-

tion of this one.

Salisbury Cathedral, from II Kenward, of Leicester, was instantly recognisable as such. Mr/Ms Kenward created Salisbury Cathedral on a CPC464, with a DK'Tronics light pen, but will settle for a Touchmaster tablet for the BBC.

A Castle by the Lake may not be the most original of artistic themes – we had several castles by several lakes – but we reckoned the quality of Alan Diamond's picture merited m prize, especially since he used his own personally written sketch program.

The fifth Touchmaster tablet goes to a Spectrum owner, Geoff Burton of Middlesbrough, for *Dragonlance*, created using Softek's *The Artist* package.

### Honourable mentions

Christopher Owczarek of High Wycombe just missed out with his version of the album cover of Z Z Top's Eliminator on the BBC, despite all the efforts of Popular's resident ZZ Top lanatic, and another sell-penned graphics utility, Gary Mitton's Robin, on the Commodore 64, used Audiogenic's Koala Painter, and added an educational llayour to the compelition.

Michael Sleight M Doncaster went for

Above: The Swan by Simon Nicol Below: Salisbury Cathedral by N Kenward Above right: Bruce McCandless by Ian Murray Right: Eliminator by Christopher Owczarek

### Graphics special

the nostalgia vote with I Only Get It for the PHMan We've got Melbourne Draw to thank for that one.

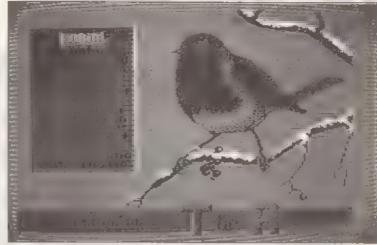

Last honourable mention goes Alex King, of Bournemouth, and Who Stole the Banana? He Did!

Many thanks to everyone who entered the competition and we'd like to wish everyone who didn't win better luck next time.

### Touchmaster tablet winners

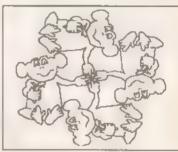

Simon Nicol, Furze Hill, Hove, Sussex, N Kenward, Leicester Forest East, fain Murray, Duntermline, Fife; Alan Diamond, Wembley, Middx, Geoff Burlon, Middlesbrough.

Ill you didn't win - or didn't enter - but would like in Touchmaster tablet, the product is available from Panorema Office Systems (Touchmaster division), Baglan Industrial Park, Baglan, Port Talbot West Glamorgan SA12 7DJ (0639 820310). The tablet costs £49.95, and is available for Spectrum, Commodore 64, Dragon 32 and 68C 8 machines.

### Repairing the damage

### A Muir explains how to carry out simple repairs to your joystick found I could imme-

oysticks and fast, furious areade games just don't mix. And it's always the joysticks that end up losing. What is worse, they always break down just as I'm doing well on Elite or Match Day Then of course, after I've pulled it free of the TV screen (which is where the unfortunate

what went on in there Uniess the shaft has snapped, the in-

diately understand

tegrated circuit has blown or a vital part of the mechanics has snapped off, mending your joystick should be a piece of cake, it will probably only entail a spot of solder or pulting same spring back into the flexible contactors If your shall has snapped. forget it. I have tried any number 🗮 glues and none of them were strong enough

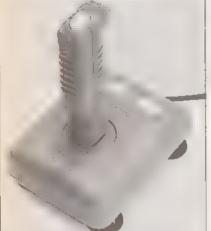

stast five minutes. The same applies to a vital part of the mechanics broaking in two - unless you are very lucky you've had it

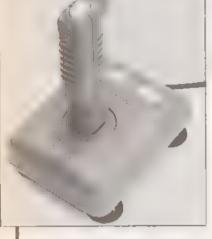

If you're familiar with soldering and flexible contactors you should be able III fix your joystick with your eyes closed II not, read on carefully

Inside your joystick there are just live circuits, not counting the ones in the chip, of course See the diagram. All these circuits have one common return, ie, there are five hall circuits and these are completed or closed by one other hall circuit (the return).

Pressing your fire button or moving your joystick causes one to the live at come into contact with the one return. So if you can stiff get some movement out of your stick it must be one of the live circuits that has come agriff. It should be an easy enough matter to find the break in the circuit and but it right. It, on the other hand, you can get no movement at all out of your stick, then it must be the common return that has gone wrong. Again is should be an easy matter to spot the break in the circuit and put it right. It is highly unlikely that anything will be wrong with the printed circuit board and most of these faults will be broken or loose wires

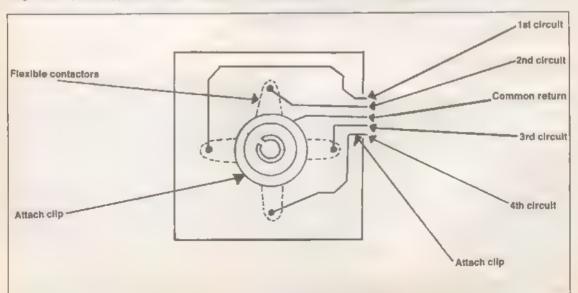

The most common failing among joysticks is the fire button. If anything is going go wrong, the fire button will. Both Quickshot and Spectravideo models

loyslick usually gets hurled), I have to fix it. By the time I get back to the game I've lost my thread and I'm soon dead, or out of the Cup Final.

Fixing your own Joystick is much easier than you might think I remember my first encounter with the innards of the infernal things I was quite disappointed when I

### Hardware .

(which are identical, by the way) have the most shameful arrangement for the fire button I have yet seen. It is quite likely to fail after even moderate use, never mind the battering I give them. If you have one of these joysticks and the fire button has packed in, then the wire from the lire button has probably worn through at the base of the shalt. You will have to replace this wire, I'm afraid, either with a stronger wire, (shielded wire is good), or modify the design slightly. The best modification I have found is to drill a small hole in the base of the casing in the place where the shaft rests and then drill another hole in the base. Then pass the wire out through the first hote, back in through the second and solder the connections again. Be careful not we crack the casing or to drill the hale too large.

Now a lot has been said about solder. If you have a duff joystick and are just about to rush out and buy a soldering iron so that you can fix it, try to buy a low voltage one The connections inside your joystick are very small things, and you don't need a great big soldering fron that will melt everything in sight

Another Interesting exercise will give a clapped-out joystick a new lease of life. Get yourself two pieces of wire connect each piece of wire to a paper clip and attach them to the printed circuit board mila manner similar to that shown in the dia-

gram. For the next part of the trick you have to type in the short program below. If you have a Spectrum and a Kempston interface you will be able to copy this program exactly. For other computers or interfaces you will have all make slight modifications. All the same you should get the idea from the listing

10 LET X IN 31 20 PRINT AT 0.0EX

30 GO TO RE

Once you have typed in the program and made sure the joystick is connected, run it.

You should see a 0 at the top left hand corner of the screen. If you touch the two wires together you will see the change to 1 or II or 4 or 8. If your fire button is working try pressing that and you should

These figures are based on a Kempston Interlace, of course, and if you have a different one the values will naturally be

If you do not see what possible use this could be, try changing line 20 to.

# X=2 THEN BEEP S.10 GEEP 5,20 BEER 5.10 BEER 5.20

By experimentation you will find that you can return 32 values from your joystick, all

the numbers between 0 and 31 I have managed to build a louch tablet using all these values but it takes time and a bit of

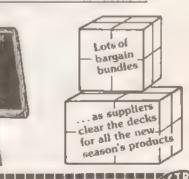

At the other extreme I ran a buzzer-type game at a fund-raising event using tust one value

With a smattering of imagination, there's plenty you can build Don't be alraid to experiment, since you cannot damage your computer (unless you connect the wires up to the mains, which is monumontally foolish)

### Better mouse trappings for AMX

t's a truism of this industry that computer hardware is useless without software and the success of any micro is dependent on the quality of the programs available.

AMX has learnt the fesson well. If it is to be singled out for credit it is in the way that it had produced some first class software for its mouse and thus generated enough sales to inspire third party companies to write for it as well.

AMX Pagemaker has been covered for the BBC before but new versions are notable m that all reported problems of incompatibility with obscure OFS's (more to do with the protection techniques than the software itselft are being tackled and overcome and there is an ever-growing range of printer dumps. The package can also now RE controlled from joystick or keyboard, so although the mouse really does work like a dream with it, you can spread the cost

Until I used a I didn't really appreciate what a gent of a program this is. The resolution of the screen mode and all the print is higher than most com-

peting utilities and it is extremely flexible.

The graphics are perhaps the weakest point you get a mini-art utility included but there are none of the extensive graphics libraries of Fleet St Editor. However, AMX promises a support release very soon including extra utilities and graphics. Once you do have a picture on screen it can be stretched, cut and pasted, superimposed, etc. Another nice feature is the ability to convert colour pictures into shaded designs in Mode 0.

The package has its own mini-word processing abilities, but you can also import files from either View or Wardwise.

Super Art i a very versatite and powerful Mode 1 artist program that incorporates features from the earlier releases AMX Art, AMX Paintbox, AMX Utilities and then some Almost every limitation that could have been pointed to in the original release has been overcome giving you features such as stippled colour fill, cut and paste, rotate, zoom, etc. One of its most important features is the ability to work on screens

buffered to disc such that an A4 size picture can be produced When dumped to one of the supported colour printers these can look superb

Again Super Art can be used with keyboard or joystick (the former is perhaps essential for some detailed work to overcome the 'wobbly hand syndrome) it comes as a 16K Romand disc of support routines

### **Top Notch**

ndrew Pennell has written a number of good books on the QL Motorola 68008 so it is not too surprising that he should have also produced an excellent assembler for hobbyist and programmers alike.

Apart from the Assembler. Devpac comes with a screen editor to help with the writing of programs. A debugger is also included that is made up of disassembler and monitor. The monitor is a very flexible piece is software that can do a great deal of useful functions like dynamic multiple breakpoints.

At the moment the top spot in assemblers in dominated by Metacomco. However Mr Pennell says that his Assembler is more powerful and laster than any of his competitors. This I totally agree with and in addition, this development package is well documented and a great deal easier to handle.

Matthew Palmer

### A Bridge almost (but not quite) far enough

P's latest Bridge Player in its series for a number of micros is the PCW 8256/8512 version.

For anyone who hasn't come across. Bridge programs for micros, the standard format is that you play South, while the computer plays the East. West and North hands throughout the bidding and play. Good Bridge programs don't cheat by taking account of the distribution of all sources.

also handle some of the better known conventions such as Stayman and Blackwood.

This one holds up on these three counts (well, if understands half of Blackwood), and it's a lot better than CP's 6128 version, *Bridge Player 3* The play has been tidled up considerably; you now get the fealing that your computer opponents are sitting up, paying attention and keeping some kind of card count. East and West, however,

still get caught out not drawing their trumps early enough

The bidding follows a standard Acol pattern, and is in most cases sound, atthough North, your computerised partner, is timid to the point of cowardice, and you still can't get it to initiate Blackwood. This means that on borderfine stam hands you'tt need to bold - there's nothing more frustrating than discovering you have a lay-down Grand Stam when the contract's Two Clubs.

Complete newcomers to Bridge could, with patience, tearn a reasonable game through trial and error on Bridge Player, especially with the 'str back and watch' option where the computer selects all the moves

Where this program really scores is in its speed and range of options. You are given five choices of speed; from lethargic, through stow, medium and fast, to instant. Translated

into actuality, medium is very tast, and slow is just right if you want to think about your play.

Options include full rebid and replay facilities – useful for trying alternative bids to goad North into a spot of derring-do, setting a specific point-count for your hand, instant abandonment of the hand – for when you're about to be utterly humilitated – and listing of the deal to the printer

i can't help comparing every new Bridge program with my long-time tavourite, Serin's Grand Stam for the C64. While Grand Stam can be unbearably slow, its card play still surpasses everything else I've seen, inctuding, I'm afraid, Bridge Player.

### Ghost gobble a go go

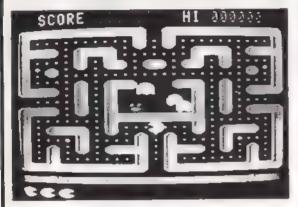

obble Gobble for the QL is at least relatively cheap. Beyond that . . well, can you guess what the game it is from the title? Yep fraid so, its Pacman again.

Gobble Gobble is not actually a bad version of the game,

extras in the game. Objects that travel through walls and some nasties other than the dreary old ghosts

It looks OK I guess, about as good as # Spectrum equivalent, with quite a lot of colour.

Gobble Gobble is a lairly

The shoot em up blasts back

except that in the early screens you (deliberately apparently) move around so lethargically the sense of threat is reduced to about nil. Believe me, if you can't crack it on the first screen of this one, you'd better hang up your joystick for ever. II does get laster

To be generous there a few

complete version of Pacman do you think that's worth £9.95? Maybe if you're absolutely addicted. **Graham Taylor** 

Program Gobble Gobble Micro QL Price £9.95 Supplier Eigen, 45 Bancrolt Road. Widnes, Cheshire WAS OLR.

# Playing the fall guv

ock m' Wrestle was Melbourne houses's big follow up to Exploding Fist. Despite the glowing quote credited Popular on the back of the Amstrad version III the game III bit III creative out-ofcontext-taking by MHI the review of the Commodore version had some doubts about playability

Rock n' Wrestle is probably too clever. The rance wrestling moves and procedures is so vast (23 possible moves) that it detracts heavily from the playability of the game.

It looks good, just as good on the Amstrad, the 3D movement is certainly a technical achievement, but I doubt you'll really want to spend much time actually playing it

What Rock n' proves, perhaps, is that there in a limit to what you can expect people in do with joystick orientated, reaction testing games. Fist was enough, this is too much.

Graham Taylor

### f you are going to do an arcade game spin off then this is the way to do it.

incentive trod the straight and narrow in creating Moon Cresta by actually buying the (Icencing rights, This meant a) that it could, in so far as it was technically possible, do as exact a copy as it wished and b) it didn't have to give It some sifty surrogate name like Space Cresta or Moon Attack

Incentive's Moon Cresta was first released on the Spectrum and has recently been converted to a number of other machines, in this case the Amstrad. Doing the convertion job properly certainly pays off. All the features of the original game have been retained, even down to the right blips and lunes

For a game that was in the arcades several years ago Moon Cresta remains surprisingly fresh and addictive. All shoot em ups are not alike, and the really good ones retain their appeal over many years.

For those too young to remember, Moon Cresta is one III those 'spaceships against the waves of aliens' affairs where the art of the game is accuracy of blasting, quickness of reactions (getting out of the way) and stabbing those defensive shields into action.

Incentive's Moon Cresta is a perfect copy of the original. and if it seems simple compared in current games, it is and always was a game and a half.

**Graham Taylor** 

Program Moon Cresta Micro Amstrad Price £7.95 Supplier Incentive Software, 54 London Street, Reading RG1 4SQ.

me with confidence. However, Actually it has a lew redeeming features

Bug Eves II is very Manic Miner, things bounce, trundle, leap and slurp around, getting in the way and losing you lives. There are platforms, lifts, seemingly impossible in collect keys that require you III

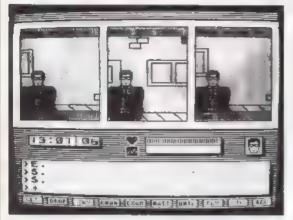

ail nicely scale sprites. Graham Taylor detailed.

Program Bug Eyes II Micro BBC Price £7.95 Supplier Audiogenic, 12 Chiltern Enterprise Centre, Station Road, Theale, Berks RG7

### Sounds like a job for . . . Redhawk

edhawk is an unusual adventure from Melbourne House. It uses a style of presentation so utterly obvious and appropriate

that the graphics are a series of trames, like those in comic strips, which scroll along as an action takes place. Similarly, when characters speak to one

some kinds of computer game it is astounding that nobody. In my knowledge, has thought of it before – comic strips

It works more or less like a standard graphically illustrated adventure, the difference is another you see a speech bubble form and the words scroll through it

Redhawk himself is a slightly tongue-in-cheek super hero. A mild mannered photographer for the Daily News in his ordi-

Bloody deeds in the land of Meridian

t is gratifying to see a wellknown company release a text-only adventure, since many companies will not touch an adventure unless 'pretty' pictures are included.

I am a firm believer that rich, imaginative text descriptions combined with a solid story, make for an enjoyable game. Indeed some adventurers would go further and say that pictures actually detract from the imagination *Pilgrim* is all this and more. Sel in the violent Land Of Meridian, author Hod Pike has excelled in his word-painting of this cruel and wartorn land.

The plot concerns the invasion of the peacefoving residents of Meridian who led a simple and happy life, watched over by the 'Guardian' who lived, so II was said, deep in the craggy mountains of Meridian and would, at some time in their darkest hour of need, provide the ultimate help.

Suddenly, one dark stormy night, the hordes of the warlike Sitvians attack your vittage, leaving behind them death and destruction, and you, the sole survivor of this onslaught, yow to find the Guardian and test the legend.

Despite mostly two word commands you'll find much to do and investigate. But be warned, this is no easy task for the faint-hearted or novice adventurer. However, it is a task you will enjoy immensely.

**A Garrett** 

Program Pilgrim Micro Commodore 64 Price £8.95 cassette, £12.95 disc Supplier CRL Group pic, CRL House, 9 Kings Yard, Carpenters Road, London £15 2HD Redhawk, superhero, merely by saying 'Kwah' (superhero transformation methods have become more sophisticated since the days of Clark Kent and the telephone boxes) His task is to defuse a bomb in a local power station and, at the same time, clear the streets of criminals - too much concentration on either one of these activities will cause problems. Either there won't be enough time to get the bomb or he suffers loss of credibility amonost law-abiding citizens.

The graphics work very nicely indeed, not too detailed, but the scrolling comic strip technique is very pleasing. For its innovatory features. Redhawk gets full marks. The problem

with the program is that the actual adventure is decidedly dodgy. There isn't much by way of a parser and the vocabulary seems fairly restricted. All too often the computer fails to understand a perfectly logical command and there is no attempt at making interesting and varied 'you can't do that' type responses.

I cautiously welcome Rednawk, although it is too expensive It's worth a look, but I suspect the basic ideas can be (and will be) better implemented on later games.

**Graham Taylor** 

Program Redhawk Micro Spectrum-Commodore 64 Price £8.95 Supplier Melbourne House, 60 High Street, Hampton Wick, Kingston Upon Thames, Surrey.

# A cut price journey to the Apocalypse

I's the not too distant future and you're driving down the M1 Sir A Scargill is in charge of a deep sea mining project, your in-car computer is in charge of the driving and all is well with the world

Bul as an adventurer you should know that an idyllic situation like this caninevitably only mean but one thing – a full blown. John Wyndham-slyle apocalypsel

The Spore looks like a cheap offering in more ways than one. The packaging is very basic indeed - but don't be looted; this is a quality product in low budget clothing.

That's exactly what lies in store - or in Spore - because you're soon in an apparently deserted hospital with a strange green dust covering everything (could the title be a clue?).

The plot has some definite shades of Day of the Triffids, but that's no bad thing. Despite having both legs in plaster, you intend to investigate.

We're in the land of Quill and Illustrator again, but they're used to good effect, with simple pictures that appear quickly, using shading effectively

Their use is far more imaginative than with most similar offerings and they are fully credited on the cover. There are one or two spelling errors which is a pity as it spoils the professional look.

The adventure is rather tinear at first, forcing you into the crash, but this is lorgivable because it's not only amusingly written, it also manages to generate real suspense which – in the end – is what separates adventures you play it he end even it it takes months to solve from those you abandon after a dozen locations.

The gradual appearance of paragraphs keeps you hanging on for the outcome of events. I've also yet to see the appearance of the dreaded compass direction commands that make most adventures seem so artificial

All in all, an excellent piece of interactive liction from a new software house and at a budget price, available from the address below.

### Games: Arcade Action

### **Under the spell**

This week Tony Kendle presents some vital clues for those struggling with Spellbound – straight from the author, David Jones

know that a lot of people will be pleased to hear that we have received the long awaited tips for Spelibound from the hand of the author David Jones, complemented by some letters on the subject sent in by our readers. David has been kept busy by his latest project Knight Tyme so it was impossible to predict exactly when his tips were going to arrive, but now that they have done I'm sure that nobody will mind it we get straight on will them rather than concentrating on Marsport as promised.

By the time you read this both the Commodore version of Spelibourd and the Spectrum 128K version of Knight Tyme tquite extraordinary value at the price; should be in the shops. The 48K Spectrum Knight Tyme and 128K Spelibourd are expected sometime in May – even more good news in that David says he will let us have some cluos that apply in both versions of Knight Tyme when everything is released (but that's no reason not to beat him to it if you get somewhere with the game)

David's next game will "probably not involve Magic Knight because I want at test a new way of doing arcade adventures, but there will be future games with the same character."

Before we get on with David's tips, can't give thanks to Jason Welkins in Gravesend for his pointers, which I will stip in with the rest in appropriate places. Another interesting letter comes from Eric Ellis in Fishponds in Bristol, who was intrigued by David's comment of a couple of weeks ago that as far he knew no one had finished Spellbound. Eric writes. "I'm sure a number of people like myself will write to say that we have done it (I had over 30 hours of time left)." Actually Eric you are the only one so far, so congratutations.

"Spellbound is the best game I have played, a bit like an Agalha Christle book full of clues, false trails and red herrings. Just when you think you are getting somewhere you either blow yourself up or fall into a pit, but me least with a touch of humour you are told how to avoid the same fate next time.

"Spellbound had me really hooked for about four weeks playing it into the early hours of the morning, making odd notes on every scrap of paper I could find – I had countless sleepless nights thinking about how to get over walls, how to keep Thor alive etc. I came to a complete slandstill at

52% for 10 days and was convinced that the game was wrong." This midpoint puzzle seems to be troubling a lot of people and is the hardest bit is the game but David has asked us not to print the solution just yet 1 will just say that the answer involves Thor and Erland

Eric also writes that "there is one point in the game that may be a bug - on the second floor wall if you summon any three characters you can just walk through the wall - it could be a bug or another trick because if you do this you are unable finish the game! Strength can be a bit of a problem but II you keep Florin under control and near the Teleportpad it's no trouble to pop back for a top up. Thor can be a pain as he seems to have no will to live at all and shulfs it despite many feeds but the game can be completed without even feeding him once which will surprise many people."

**Cryptic hints** 

Well, after setting the scene with those cryptic hints let's get on with the nitty gritty from David. We'll let you know the secret in Thor next week.

First he was surprised at the start address given in the pokes from Paul Miller a couple of weeks ago - the actual start address of the game is obtained by

Randomise Usr 26627. One of the frequent comments we get is that readers find it refreshing that a programmer of David's quality doesn't try to stop people from hacking into the game i suspect this is partly due to Mastertronic's pricing policy and I'm not sure how much say David would have in it if the cover price was £10 or so.

Lack of energy

Anyway regarding Spellbound, David confesses. "In the loader the start address was 26624. If any editing of the loader is performed the binary representation of the loader also gets automatically changed in become address 26624 and the game then jumps to a Hackercatch routine I wrote I didn't do this to stop hackers, just in have a bit of fun with them. Any hacker worth his or her sodium chloride should cope with no problem.

'On to the proper clues. Read the Crystal ball every few minutes since there are a lot of clues to be had there and they will change as time passes. When you are not in the lift the ball can also be used to locate characters. It is useful to keep the transporter pad in the lift since you will then be able to get to different floors quickly from almost anywhere.

"If you are dying last through lack of energy then you must use the bottle of restorative fluid from the left most room of the root garden. Give this to Florin and then take it back for full energy. Then give it back to him etc. You could of course avoid this problem by using the pokes published.

Before you can command anybody you must fetch one of the objects shown on the cassette cover from the roof garden

Once you have dropped the glowing bottle and released the Banshee it is useful in command her to help Banshee has a series of clues that will change in a similar tashion to the ball.

"Lady Rosmar will help you later if you give her something to go with what she is carrying (te, of the same category of object). She will help you in the room where you find the object.

"Samsun is a sporting chap and would like to have something decent to throw before he can help you with the object that he has. "Elrand Halfelen does not want or need the saxophone. There is some other instrument he would like to use."

The answer more puzzles next week

### Games: Adventure Corner

# The compilation craze hits adventures

Tony Bridge turns his attention to compilation tape comprising ten adventures, from Central Solutions

entral Solutions' Ten Pack was, for me, a Nine Pack, as one of the adventures, Time Quest, was missing from the tape sent to me for review, but unfortunately, this omission was soon recilied, threefold, hugh Welker, old Irlend, immediately fired off his copy imme, and at the same time, I received another copy from Mr Kneller of Harrow. Central Solutions itself also supplied me with a copy of the errant adventure. Thank you all very much

I have long since given up trying to fathom out the relationship between Central Solutions, Doubleptay and Logic Sates — the various adventures seem to go round and round these companies, and many of those Quill'd programs that have been mentioned in these columns have found their way on to tapes from one or other of the labels.

Time Quest, from the Quill of Peter L Robinson, is, I'm glad to say, well worth looking at, and makes the Ten Pack even better value than I had thought. Your hero starts his quest in a strange land, whose king has enjoined you with promises of great wealth, to find the seven fabulous treasures - methinks that these treasures are not going to let up their secrets lightly! The location descriptions are rather sparse, and problems will only be solved by careful matchings of words to deed. For example, Push the boulder A reveal a useful object tucked away beneath (for some reason), but later, you must Slide a table. There is no clue as to the word which must be used, so If's a case of out with the thesaurus and work through the

This a pretty good, though very small, adventure for beginner: an expert will not be diverted for long. However, despite the

short text descriptions, there is a good atmosphere about the game, and there is plenty to do white problems are being chewed over. And it's nice to see *The Quill* getting lots of mentions in the form of magic words and other gimmickry. Not worth an awful lot, I feel, on its own, though well worth a look at in the company ## the other nine adventures on the *Ten Pack*. More details from Central Solutions Ltd, 500 Chesham House, 150 Regent Street, London WIR SFA.

Now to a Quill'd program on the Amstrad, Longtime readers of The Corner will remember Neil Scrimgeour from many months ago (have you finished Ring of Darkness yet, Neil?). He has recently completed his own adventure for the Amstrad. The Lost Phirious, released through his own software house. Vidipix This is the first Quill'd program that I've seen on the Amstrad, and it isn't too bad. It's not brilliant, either, but then the £2 50 asking price is not going to break the bank if you want to have a look. It's the first part of a 'quadrilogy' concerning your quest to recover the space cargo hauter Phirious and its "mysterious contents": the story starts on board the Castopia, a stranded space ship that you, on your way to Earth in search of more into on the tabled Phirious. have stumbled across drifting helplessly ... space, just like the Marie Celeste. As you board the stranded hulk, your vessel explodes, leaving you to sort out the mess

### Stranded hulk

The scenario is hardly original, and the layout and appearance of the adventure (despite the name of the company, there are no graphics) are rather unprepossessing and haphazard – sometimes you are

told Exits S.W and at other times. Exits are East, North. The problems will have you scratching your head for a while, though careful scrutiny of messages will be of some use. An example here is the robot that kills you off with monotonous regularity, until you realise what he has said before despatching you: "Disgusting!" And here you are, carrying the fig leal! Wearing it of course allows you past the robot - there are a couple of other locations which are similarly impassable until a simple routine is followed. And II you find a problem insoluble, don't as suggest by the Help command, write to me, as I haven't been given a help sheet either!

### Four tapes

Atthough I wouldn't normally lind it posable to recommend this adventure above others (I find such responses as "You cannot do that, my old goos-goog" and "what next, thy Mega-brain" particularly stupid and boring), the extended scenario spread over four tapes, and the suspense in linding the fabled treasure of *The Phirrous* may keep the player engressed. One other point is worth mentioning the progam tells you where to start your map, so there'll be no running off the sheet of paper after the first half-dozen locations, very useful!

Vidipix can be contacted at 125 Occupation Road, Corby, Northants NN17 1EG.

WAR OF THE WORDS FROM ARIOLASOFT

IV 128; 80-COLUMN MADE EASIER

XII SIMULATIONS FROM MICROPROSE

LOAD'N'GO BUDGET DISK PROGS A lthough overshadowed by the news of the Amstrad takeover of Sinclair, the story of Commodore's marketplace struggle continues. With new products such as the astonishing Amiga on the way, and recent releases such as the 128 now settling into a steady sales pattern, there has never been more activity from the US giant.

This week's supplement covers some of the hottest topics in the Commodore world. We give you a preview of the 7th official Commodore Show, which will mark the UK launch of the Amiga; look at the Microprose simulation programs which stretch the 64 to its limits; tell you how to get an 80-column display on the 128 without spending £300 on an RGBI monitor; and look III the range of word-processors from Batteries Included, distributed here by the increasingly influential Ariolasoft. Something for every Commodore microuser!

# **CBM Show is go**

The seventh official Commodore show looks like having plenty to offer, besides the UK launch of the long-awaited Amiga PC.

The show, at the Novotel in London's Hammersmith on May the 9-11th, has, according to organisers Database Exhibitions, attracted unusually high numbers of advance ticket sales.

For many visitors the main attraction will be the Amiga Village, where the impressive new 68000-hased machine will be given its first extensive public airing. Software from both US and UK developers will be on show, including TDI's Pascal-based compiler which is priced at £99, and Precision's redesigned Amiga version of the top-selling 64/128

program Superhase. Precision will also be demonstrating packages from Californian company Aegis, including the Animator graphics program.

Although the major focus of interest may be the Amiga, the 128 and 64 will not be forgotten. Already there are promises of sixty new products on show.

Timeworks will be showing three new products; an eighty-column word processing package for the 128. Word Writer, an enhanced version of Swiftcalc 2, a spreadsheet, and the 128 version of Personal Pinancial Planner.

• Evesham Micros plans to show three new products. Freeze Frame Mark 2 is an improved version of the popular disk fransfer cartridge, offering improved disk filing efficiency and tape save speed. Like the original Freeze Frame, backups produced with the cartridge can be run without the cartridge in place, and Evesham claim that it is totally transparent to all software. The Quickdisk + Upgrade is another new product offering a speed improvement for the 1541 disk drive of 10x on loading, 6-8x on saving.

The final new product is the **Dolphin DOS**, a German parallel interface which improves the loading speed of the 1541 by up to 25 times. Saving times are improved by up to 12x, sequential file speed by 10x and relative files by 3x. The disk format routine leaves a massive 749 blocks free for

data storage, and there's a machine code monitor and other features included.

 Vanguard will be showing the Starblazer joystick, costing £11.95, and the space game Ciphoid.

 Wigmore House is to release The Artist, a hi-res art package for the 64/128.

 CA Distribution from France has three new products, including an emergency power supply, a printer power pack and a "nower cartridge" for the 64.

 Sagesoft's entire range of accounts packages will be on show, featuring the new versions for the 128.

 Anirog has two new games, Thai Boxing for the 64 and Winter Events for the C16 and Plus/4.

 Supersoft's digital drum machine for the 64, priced in under £40, will be on show for the first time, along with an update for the Microvox digital sampler, and an assembler for the C16-Plus/4.

In addition, a 120-seat theatre is being built within the hall, to provide non-stop events throughout the show. These will include music performances by keyboard whizz Rick Wakeman and backing band Duel, a film show featuring The Commodore Story, and special events organised by individual exhibitors.

The £20,000 theatre will be situated on the lower floor of the Novotel, and will be used to stage the faunch of the Amiga on the first morning.

Advance tickets are available from Database Exhibition. Contact them for details on 061-456 8835. We'll carry a full report of the show after the event.

### **COMMODORE'S BATTLE OF** THE WORDS

The development of more powerful home computers, many with built-in or bundled disk drives, has encouraged the development of better and better utility software packages. However, this has meant that the top-line packages have become so complex as to discourage the casual user. The obvious solution for wide-based software companies is to deal with range of software covering all levels of interest and ability. This is Ariolasoft's aim with the wordprocessing packages from the American company Batteries Included.

The first package, New Paperclip, is a complete professional word processor for the C64 or C128. The package comes with a double sided disk with C64 programs on one side and C128 programs on the other. Also included is a security key (dongle) which plugs into one joystick port, and a user manual.

The manual is a spiral bound, 128 page book with very small but clear text, and is very well laid out and readable, it includes a tutorial session in the start of the book to show how to use Paperclip quickly and easily.

Backup

The disk supplied with Paperclip is not protected, so a backup should be made as som as possible. It is not necessary to backup both sides as each side has all the necessary programs for each version. The C128 version allows the use of an 80

**IMPOPULAR COMPUTING WEEKLY** 

column monitor. I must admit that I had look. When the text is ready to view, select great problems with video output and the page appears on the the 80 column mode. screen. The unusual teature is that all the as the 1st column words have been changed to small boxes. As the boxes are different lengths to represent kept disappearing off the edge of my the word length. Ferguson TV/ this gives a very Monitor, I will give clear idea on what Ariolasoft the benefit of the page will look the doubt and like. On the C64 assume that it is my version this method of display will only lead/monitor work on 80 column

causing the trouble. Changing from 40 in 80 column has been made a lot easier as the program has been written to detect if the 40/80 switch has been pressed. If II has, the output is automatically changed. This eliminates the need to restart the system every time you wish to change the video output. All the editing functions are the same between the two versions.

Paperclip is one of the most powerful word processors that I have come across on the Commodore so far. It will perform all the usual functions of entering text and amending text very easily and quickly. The power of Paperclip becomes apparent when you start looking at the additional features. Text can be saved to either tane or disk and in 'screen format' characters (standard) or CRM ASCII for transferring # other

For ease of use, Paperclip allows up to III common phrases to be assigned to memory, and with just two key presses the phrase can be entered into your text. Text can also be moved from file to file very easily, as well as appending, from disk, onto your current

When using columns of data in Paperclip there are several special commands which allow easy use. The columns can be moved, added, deleted or sorted from within the text editing mode.

To aid the laying out of a document which is larger than the monitor that you are using. Paperclip has unique method of showing how the finished document will

text. On the C128, Video mode will display 40, all or 160 columns on a composite type monitor. On an RGBI type monitor widths of 80, 160 or 320 can be viewed, though only document widths of up to 250 columns can be created on Paperclip.

The other main feature of this package in the ability to create and print out standard form letters, mailing list and labels. Paperclip can store data as a sequential file. I can then read data into a document that has been prepared with spaces left for the additional data to be entered automatically on printing. Paperelip can also use data prepared by other programs, provided that it is in the correct format.

### Printer

When it is time to printout the text Paperclip will allow headers, footers, page numbering indentation and many other formatting commands found on the more expensive word processors. Most printers are supported by Paperclip, but if you have a really obscure printer then a facility is provided to allow you to set up your own printer definition file.

This is a very powerful and professional package, very popular in the States, and should satisfy the most exacting micro user.

The second package is HomePak. This is a reasonable word processor with the addition of a 'database' and a communications program. This package is designed for the user who does not need a full word processor, just something which is quick and easy to use. The program is written for the C64 mode.

The word processor is in the medium range between a professional package, such as 'Paperclip', and a text editor like 'Cut & Paste'. All the necessary edit and save text functions are included but the number of

CHOOSING A WORD-PROCESSOR CAN BE A DAUNTING TASK – HOW DO YOU AVOID GETTING STUCK WITH AN UNSUITABLE PACKAGE? TONY HARRISON-SMITH LOOKS AT ARIOLASOFT'S OPTIONS

extra functions is reduced. All the commands are displayed in a number of menus, which makes learning how to use the package very quick. Some of the more frequently used commands are available direct from the keyboard to save time and effort. All the commands are in easy to remember words, rather than the more sophisticated commands on some other packages. Text can be moved around in blocks and copied to other sections III required, a search and replace function is also included for finding and correcting a string of text. HomePak also has a preview option similar to Paperclip. The main difference is that this mode only works on 80 calumn documents.

The printing of the text allows heads and footers on the pages as well as the positioning of margins. If your printer is capable of it, enhanced, underlined and bold printing is supported. HomePak Will allow data from the built in 'Database' to be included into the current text being edited. The main criticism is that the manual is of the bound book type rather than the spiral bound type as in Paperclip. This is a problem because while you are trying to use the package, the manual keeps closing!

### Editor

HomePak also includes a very simple database which allows three pieces of information to be stored on each record. The format for a record is Subject/Tag/Object. The maximum record length is only 80 characters. The good thing about the database is the enquiry language that is used a control it. For example it you enter "Who's Mike?", it will display all the information stored under the subject Mike. This can be done on any of the three fields in the record.

The third part of HomePak is a communications package, I did not try this, but it states in the manual that it is for modems using the RS232 port on the back lill the Commodore. This section is very American and B always talking about Compuserve. As this is an American database, I do not think many of you

will be using it: TOO EXPENSIVE!

The third Ariolasoft package in this trio is Cut & Paste. This is a really good text editor. It is designed for people who will only want to write a letter occasionally, and cannot see the need in buying an expensive word processor. The package is for the new and occasional user and should Bl an example to all others who think that their software & manuals are user friendly. The manual is clearly written, simple and a delight to read. This is the only package that came with a data disk ready for sue, so that if you bought this package, you could take B home and load it up ready for sue without buying anything else.

### Duckshoot

The text editing is limited to edit, save and load. Blocks of test can be moved by 'Cutting' the text out and storing it in a buffer and then 'Pasting' III back onto the document III its new position. This makes it very simple but very effective. All the commands needed to use this package are on a scrolling menu IIII the bottom of the screen, (very much like the duck shoot menu of Componet). This method of menu helps in making this package very easy to sue, because you do not need to switch between text and the menu. Some new

 Supplier: Ariolasoft, 68 Long Acre, Covent

 Garden, London WC2, 01-836 3411

users get very worried when their text disappears and a menu appears!

Cut & Paste will allow blocks of text to be indented and tabs to be set. Forced pages are supported as well as automatic page numbering. In keeping with the user friendly nature of the package, disk housekeeping commands allow the formatting of a disk as well as deleting and cataloguing programs on the disk. The one thing that highlights the friendliness of this program is that when it comes across an error it starts the message with "Sorry...". The only thing I found missing in the manual, is that but nowhere does it tell you to go into C64 mode in order to use Cut & Paste on the 128.

In conclusion, if your applications require a lot of text and editing, then Paperclip is the package to use. There is a spelling checker available for it, Spellpack, which is due to be released in a package with Paperclip in May.

For average use of text and editing facilities, HomePak is acceptable. The manual was the only disappointing thing in an otherwise reasonable package.

Last but by no means least, if you only have occasional need for a word processor then I would recommend Cut & Paste to anybody. This is a really great package, though the casual user might have second thoughts about the price.

# THE 80-COLUMN PROBLEM

HAVING SPLASHED OUT ON A C128, HOW DO YOU AVOID PAYING £300 FOR AN 80-COLUMN MONITOR? TONY HARRISON-SMITH ON INTERFACES, ERIC DEGHAYE ON DIY

There are many different types of video monitors available for home and office computers. The main types are RGB, RGBI and Composite Video. Unfortunately up to now 80 column mode on the C128 has been limited to RGBI only, since the 80 column, signal is routed out only through the RGBI port. To solve this problem, three companies have come up with various leads and interfaces to remedy this situation.

Before I go into more detail about these devices, I will try and explain in layman's terms what the difference is between each type of monitor. All the above terms describe how the picture a transmitted from the computer to the monitor. Composite Video sends the picture and the colour down as one signal, and the signal is then decoded with monitor.

RGB on the other hand sends the picture

£49.95. This is a mains operated unit which converts the RGBI signal to separate video and colour signals. On the unit itself is a switch for 40 or 80 column mode. This unit allows the full 16 colours to be used.

The second lead from Trilogic is the TML30, which is a more reasonable price of £9.95. The catch in that it only gives a monochrome display. The TML30 is not mains powered; it's just a cable that connects to the front video input socket on the monitor.

Display

For RGB munitur users there are a lot leads available. Robtek supply a lead called the Magic Monitor Interface which is priced at £14.95. This lead plugs into the video outlet and the RGBI outlet on the C128. At the other end of two very short leads, only about 2 feet long, there are two phono

about 2 feel long, there are two phono

down to the monitor in three parts, its three colour elements of Red, Green and Blue. RCB also sends two other signals which synchronize the three colour signals. RGBI is similar to RGB, but it has an additional signal, intensity. Needless is say, generally, none of the above methods of picture transmission are compatible with each other.

### Interface

There are now several different interfaces to allow 80 column mode on different types of monitors.

If you use a Commodore 1701 or 1702 monitor, then Trilogic can provide two different interfaces to allow 80 column display.

The first, and most expensive of all the interfaces reviewed, is the Vidcon 2 at

plugs for connecting to the monitor. If your monitor uses a different connection, a DIN plug for example, then Robtek tell me that a new plug can be fitted. If you send the lead, £2.50, and a pin layout of your monitor to Ram Electronics, Unit 8, Redfield Industrial Park, Redfield Lane. Church Crookham, Aldershot, Hampshire, CUI3 ORC, they will fil a plug for you.

Trilogic supply 3 leads for RCB monitors. The first is for the Ferguson MC01 TV/Monitor. This lead is the TML34, which costs £19.95. It also includes a colour interface which is powered from the cassette port. The cassette can still be used with the leads plugged in. The interface allows 8 colours to be displayed on the monitor.

The other two leads from Trilogic are the TML35 for Hitachi TV/Monitors, and the

TML35 for the Fidelity CTM1400 TV/ Monitor, Both these leads retail at £14.95.

As the above review has shown, most types of monitors can now he used with the C128 in 80 column mode. If your TV/Monitor is not mentioned above, then Trilogic say that special leads can be made to order. If you supply them with the make and model of your TV/Monitor, input socket connections and input signal requirements, they will gladly quote a price to you.

For owners of Microvitec monitors, which have an RGB TTL input, hope is uffered by Cascade, better known for their games compilation packages.

Despite assurances from Commodure and Microvitec that RGBI and RGB TTL (Transistor/Transistor Logic) are totally incompatible. Cascade claim to have come up with a suitable interface lead, providing an eighty column display in full colour, at the cost of £19.95.

Also available are a series of adaptors, costing £5, which allow the interface to be used with any RGB monitor. Cascade would like potential purchasers to contact them with details of what adaptors are required, and the company also plans to bring out an interface incorporating a sound amplifirer (since many RGB monitors have no sound output) if there is sufficient interest. Again, contact Cascade if you would like more details of this and other plans.

### Standard

The standard cable is recommended for use with the Microvitec 1431 dual standard monitor, which would then be able to display 40 column and 80 column at the flick of a switch.

Although we have not had the opportunity to test the lead – and Cascade aren't giving away the details of how it's done – this would seem the ideal choice for users who have already splashed out on the high-quality Microvitec monitor and are reluctant iiii part with it.

# . . OR THE DIY SOLUTION

A nyone who has bought a Commodore 128 and expected to run the display in 80 columns with a TV or 1701 monitor must have had a bit of a disappointment, as Commodore implies that if you want 80 cols, you have to fork out the necessary £300 for one of their new 1901 RCBI monitors. However, Commodore doesn't tell you the full story. You can actually implement 80 columns quite easily, though only in monochrome, on any display system which possesses a video signal input.

There are two monitor output sockets on the back of the C128; • - Composite video signal (the round DIN plug, description on page C-5 of the manual) which gives only 40 columns • - RGBI output, twrongly labelled 'user port' in page C-6 of the manual) which gives only 80 columns.

The selection of the type of display used is done either at power up, or by doing a

run/stop-restore while the 40-80 key is depressed (or not). But how do you make good use of these sockets without buying a dedicated monitor?

If we look at the pinout description of the RGBI socket (see fig. 1) we see that pin 7 is labelled 'monochrome'. The signal coming from this pin is actually standard video output, but monochrome only. This signal can be used to drive ANY monitor which has a video input, like the Commodore 1701, where the 'video in' socket is at the front.

To have a truly versatile system, you will also need another connection \$\mathbb{B}\$ the \$40 col. socket, in order to have sound and \$40 column. (Note that the sound output will only come through the \$40 col. socket, the RGBI does have sound output). Fig. 2 shows the pinouts of that socket, and we see that there is a video out pin, giving a colour

output. All we need to do now is to make a suitable collection of leads.

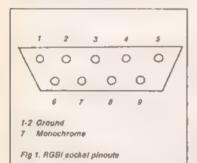

Take about 1 metre of braided cable and solder the braid at one end on pin 1 of the RGBI 'D' connector, then solder the core to pin 7 (see fig. 3). Close the plug case and solder the core of the cable at the other end on the centre pin of the video in plug, then solder the braid on the outer pin. This will the 80 column output.

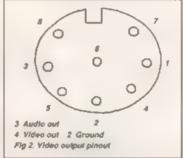

The other plug needs two length of cable, one for the video signal, the other for the audio. Solder both braids on pin 2 of the din plug, and the core of the first cable on pin 3 of the din plug. At the other end of this cable, solder a plug to match the audio in socket of your monitor in the same fashion as described above, (see fig. 4). Solder the core of the other cable to pin 4 of your plug, and again solder a matching plug for the video m socket of your monitor. Close the plug cases and there you go, you have an 80 column adaptor.

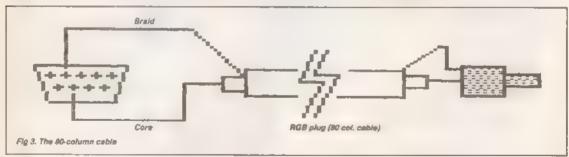

To use, select the type of display you require, and plug the corresponding plug into your monitor, you do not need to remove the audio plug.

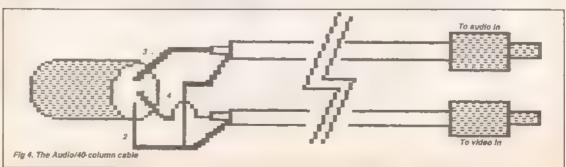

Alternatively, you can put a single pole double throw switch for easy selection.

This cable will work on any monitor which has video and audio in sockets (Note that on the 1701 monitor, you must change the position of the switch at the back). If you use the family's tv and have a video recorder, plug this cable into the video in the VCR and you will have 80 columns on a standard TV.

# Wild Bill is flying away from home

TOM COURTNEY TALKS TO MICROPROSE'S KING
OF THE SIMULATIONS AND REVIEWS THE LATEST TITLES

The Royal Court in London has seen some dazzling actors in its time. But this month, the biggest show in town was next door at the Royal Court Hotel where "Wild Bill" Stealey was the main attraction. Major Bill had flown in to give us a taste of what was to come from Microprose software, the uncrowned kings in the flight simulator world.

The news in that Microprose are renewing the offensive in the air as well as opening up two new fronts on land and under the sea.

For a company which spends several manyears developing its products, there is a positive torrent of programs to be refeased in 1986. Silent Service and Acrojet are due in May. This should roughly co-incide with the belated launch of two wargames. Crusade in Europe and Decision in the Desert. Following close on the heels of that lot are Solo Flight II in June and Gunship in September. Also in the Autumn, a follow

up 6: Silent Service is planned, which will show the other side of the corn when you take command of a destroyer attempting to save your convoy from the wolf pack in the Atlantic. The company also has a third string to its wargames bow with Conflict in Vietnam, but that may be considered strictly for the Yanks, and may never see this side of the Atlantic.

Marketing

Bill Stealey tells you all this m his usual verbal assault mode. Being on the other end of this harrage is to feel disorientated and dazed. Gradually, your senses return. You realise that there are other software houses out there, a possibility Bill hardly admits. Refuctantly, he concedes that Microprose are only the third to fifth largest software house in the States, Activision and Electronic Arts being the two big names Bill is gunning for.

If the latest Billboard charts are anything to go by, in the States at least, it is a light he's winning, P-15 is at number flatter a whole year in the charts and Silent Service is number 5, with 17 weeks behind it "When you talk about market penetration. 70 per cent of computer owners have three or more Microprose products over there! We're already got 30,000 advance orders for our 'Nam game."

On this side of the Atlantic, Microprose have yet to really break into the mass

market. "U.S. Gold have been doing a great job for us, but we feel that with a little more effort we could make a much bigger impact" To this end Microprose is setting up its own office in this country to try to improve marketing. But there are other problems. The company's games are written on disk, and never designed to work properly on cassette, "Our boys just keep working until they've filled the disk up!" This means, in Britain's mainly cassette based market, the games are awkward to play. The packaging also suffers. Most major high street chains want a single or double cassette case, into which you can only squeeze the most basic manual This compares badly with the American A5 size versions with comprehensive manuals of around 50 nages!

Problems aside, Bill believes the combination of strong products and better marketing will do the trick.

Gunship

Microprose are also interested in recruiting some british programmers to try to get more in tune with the British punter. "We've already interviewed some big names, either to work here or back in Maryland with our other 15 in-house programmers." Gunship was originally due at the beginning of the year, but, after showing it several army helicopter pilots, he decided a still needed some more work. "Helicopter flying is totally different from jets. It's all about tree hopping, using the terrain, Sowe've gone for a full 3D system that'll take your breath away. It's all about technology as well, so we've got all the systems in there including TADS (you aim the gun just by looking at the target). Once again, it's no shoot-em-up, there'll be lots of missions including some lightly armed stealth missions we even improved slightly on the real thing, we gave the chopper air to air missiles. With the new Soviet attack helicopters its something the air force are considering as well."

Solo Flight II is an updated version of Solo Flight. It features synthesised speech

and a night flying option. The speech is used in the instructor pilot option which you can use to take you round your first circuit. This unique option makes it so much easier to get into the game proper, a common criticism of flight simulators – especially from Major Bill himself. "I can't

even land Flight Sim II (from Sub logic) and I've got 3000 flying hours behind me!"

For the Amiga, Microprose plan conversions of **Gunship** and **Silent Service**. "Obviously these will be better with faster graphics."

Microprose has never produced a "zap"

game or an arcade adventure and probably never will. "If you want that sort of game, then don't buy one of mine. But # you want to test more than your speed of reflexes, if you want 100 hours plus me eniovable game playing, then Microprose probably have a simulation that's right up your tail pipe.

### SILENT SERVICE

Run silent, run deep, Submariners with he type. Hours of boredom followed by moments of sheer terror summed up existence aboard a submarine in WW2. Not particularly promising material for a computer game, but Microprose has decided to bite the buffet with this detailed and challenging simulation of life beneath the waves.

The most common comment you'll get from anyone watching you play this game in "go on, shoot him". This advice inevitably leads to disaster: the successful player in this game has to be prepared to play sat and mouse with his prey. Look for an opening, decide when to make your attack, be swift and decisive in your execution. After that, don't stand around to watch the fireworks: dive for all you're worth and hope you can avoid the revenge of the escorts.

TOURTOD DAYA COMPUTE TAMBET RAMBE 1556 WARDS TAMBET TOPICE: 10 MMGTS MMBLT ON BORE 59 016 SPECIAL O PEPENS D MEGBINGS 1582 TOPPED TIMES TO SEC.

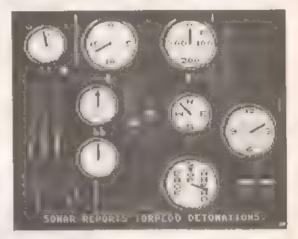

There are three modes of play: practice, convoy action and campaign. Practice just gets you used to handling the controls, firing the gun and the torpedoes. Next, try your hand at one of the six convoy scenarios given. These cover most of the situations you'll come up against: night actions, day actions, shallow/deep water, early/late war. The period of the war determines the technology deployed by each side.

Once you've polished off a few convoys, it's time to take on a patrol. Five scenarios are available this time, covering some of the most famous patrols of the Pacific war. The game starts with a map of the south west Pacific; you move your submarine to the point where you consider Japanese ships are likely to be, if the screen border turns red, you're on to something. Hit the fire button and the screen changes to the inside of the sub. Check the map, work out your attack. Then it's eyes to the 'scope and see what you've got. If its the odd small cargo ship

with a heavy escort, then discretion can be the better part of valour. But if there's a tanker or two with only a couple of slow Kaibokan escorts then it's action stations.

Control of most functions around the sub is form the juystick, using screen icons. It doesn't take long before you're effortlessly flicking between the map, periscupe, instruments and damage control.

This game will no doubt leave the zap addicts utterly cold. It amply repays close attention to the 50 page booklet that comes with it. If you are happy jugging at least half a dozen factors against

one another, then you could have what it takes to become an elite sub-commander. An original idea brilliantly executed.

### **ACROJET**

So you think you're a hotshot pilot? You can land Solo Flight in tog over Steamboat Springs with half the instruments out, you can fly Fighter Filot ald, but are you ready for Acrojet? This has to be one of the most demanding plane simulators on the market, and there's not even anyone shooting at you!

The program puts you at the controls of a BIN-51 miniature stunt jet, like the one used at the beginning of the James Bond film Octopussy. The program offers you ten events to take part in. The object is to complete the given course and stunts as quickly as possible. This really makes flying Acrojet a "whole new ball game" as Bill Stealey would put it. Being up against the clock, its no longer just enough to avoid crashing the thing, you've got to fly as close

to the wind as you can, taking as many chances as possible to get a fast time. Although the usual comprehensive manual takes you right through from the basics of aerodynamics and manoeuvres to hints on every event, this is probably not the flight simulator to cut your teeth on. However, if all this is a piece of cake, well, start turning up the wind, turning down the jet's performance and generally make your life bell.

The controls are sensible, and the graphics informative with all the information you need at your fingertips. This game is definitely one for the simulator butts to show off with. Right, where did I park my Pitts Special?

# Thrills without frills?

CAN DISC SOFTWARE AT £7.99 BE WORTH BUYING? CHRIS JENKINS SAYS YES TO THE LOAD'N'GO SERIES FROM BUG-BYTE

There is a theory that it's the price of software, rather than that of hardware, which restricts the populanty of disk drives in the UK. In the States, where income is bigh and hardware prices luw, very few computer users use cassette based software and disks are the standard storage medium. This obviously makes more powerful software feasible, and accounts for the difficulty of converting some US products to the cassette format more usual in the UK.

Now it looks as if for the first time the vicious circle of high disk drive prices and high disk software prices may be broken by the UK. The Load'n'Go series from Green Valley publishing, distributed here by Bug Byte Software, is cheap, easy to use, and packaged in such a way that disk software may become an "impulse purchase" in the same way that budget games have.

Simple

This meant a bare minimum of packaging, no manuals (all the instructions should be on the disk in the form of menus and help screens); fast development time and high-quantity marketing. Like the UK's budget games labels, where profits are low per unit, sales must be high, and special outlets and displays were developed at computer specialists and chain stores.

Bug Byte's marketing deal with Green Valley involves, initially, a batch of nine disks and one hardware product. All the disks have several aspects in common: vacformed plastic packaging, no manual, and a price tag of £7.99. What, you might well ask, can you expect for £7.99? Obviously the programs have no frills whatsoever; no graphics, significant sound, or remarkable features. What they do have is a refreshingly simple approach and straightforward operation.

• Master Word is a simple word processor • you might prefer to think of it as a text editor – which includes a number of demo letter files. These cover a number of useful subjects, such as business (nine examples) home affairs (nine examples) and love letters. Appallingly slushy and American, these will at least give you something to laugh about before you turn to the serious stuff.

The program runs through a series of menus, and at each stage you select the option you want – create document, edit document, save, directory, and so on, with a single keypress. At every stage there is a help menu available, which will explain all the options at your disposal and how you control them. This aspect is common to all the Load'n'Go programs.

Master Word features insert/delete, tab, line insert/delete, cursor control, skip page, skip to end, and so on. Print options include double spacing, page length, top and bottom margin, and so on. Master Word is fine for short letters, though not suited for heavy use since it doesn't allow such things as page headings, mail merge, file rename, and so on. Many computer users will go mad over it, though; I can hear them now, saying "This is all I want – why couldn't someone have come up with this before!"

• Pro Financial Organiser features three useful utilities. Chequebook Balancer is a simple fedger into which you can enter all deposits and withdrawals; Electronic Calendar is a month planner which allows you to place markers on particular days, and project ahead for the rest of the year; and Mail List Manager is a label printer.

For those who require a more powerful database, there's G-Base. This allows you to create 600 records per file, editing and adding as you require. The disadvantage is that a file may not be larger than the capacity of a single disk.

• Home and Business Card File is a contacts lister. It allows you to store your data by name, title, name of business, business type, address, phone number and any additional comments. You can search by any category, and produce bard copies to form a permanent contacts list.

• Home Finance Organiser 1 contains a less powerful database, Address Keeper. This allows you to store names, addressess and phone numbers only. There's another version of the Chequebook Balancer, and The Budgeter, a limited financial plotter (it will only cope with figures up to 9999.99) which allows you to keep track of expenses, adding and deleting as appropriate.

• Electronic Scheduler is just that – an appointments diary which will sort by name, data, time, person, location, subject and special comments. You can of course update, on a daily, weekly or monthly basis, alter records and view on screen or printer.

● Family Tree, one of the more original packages, allows you to record information on up to 300 relatives, including birthdates, deaths, relationships, occupation, and, according to the blurb, "funny habits"! Up to 24 lines of 40 characters each may be stored for each individual, and each family tree stored on a separate disk. The program is a little intolerant of incomplete records you can't mark an individual as being a sister or brother unless they have a parent entered, for instance — but it should be adequate for ill but the most exacting

genealogists.

The most straightforward of the data handling programs is the Personal Spreadsheet, which gives 16k of memory and a 15 × 50 workspace. You can calculate the sums of columns or rows, perform basic functions at any point, average across rows, or perform a series of up to nine calculations. Unfortunately you cannot store these strings of functions to repeat them fater.

The last two products in the Load'n'Go series are programming utilities rather than data handling software. The Commodore 64 Utilities disk includes directory lister, disk format routine, file copy/transfer, file rename, erase and validate, and a master disk directory manager.

The final product is a hardware utility suite, the One Step cartridge. Similar in many ways to the familiar Robtek Turbo or H&P Final Cartridge, One-Step has thirty functions including auto line number, file copy, free memory, load address, un-new, screen dump, cold start, change disk drive device number, change colours, and various load and save functions. There's also the ubiquitous reset switch to allow you to reset programs without wiping the memory. One-Step may not have some of the fancy extras of its competitors (machine-code monitors, extra memory space and so on), but it does have the advantage on price at £14.99.

#### Value

Overall the Load'n'Go series, though unspectacular in comparison to more expensive programs, do the Job well and represent excellent value for money. With some sensible little touches (such as the facility for making back-ups) and a very straightforward approach, the whole cheap disk concept seems ready to take off. My only reservation is that the packaging should be more informative; it wouldn't be too much trouble to at least give a full list of the routines on each disk, and with more sophisticated programs such as an icondriven word processor on the way, it would be a pity if it wasn't made quite clear just what good value for money Load'N'Go represents.

#### SUPER BREAKER BACK-UP BOARD FOR THE CBM 64, CBM 128 AND VIC-20

\*\*\*\* THE BEST VALUE FOR MONEY BACK UP BOARDS FOR COM COMPUTERS \*\*\*\*

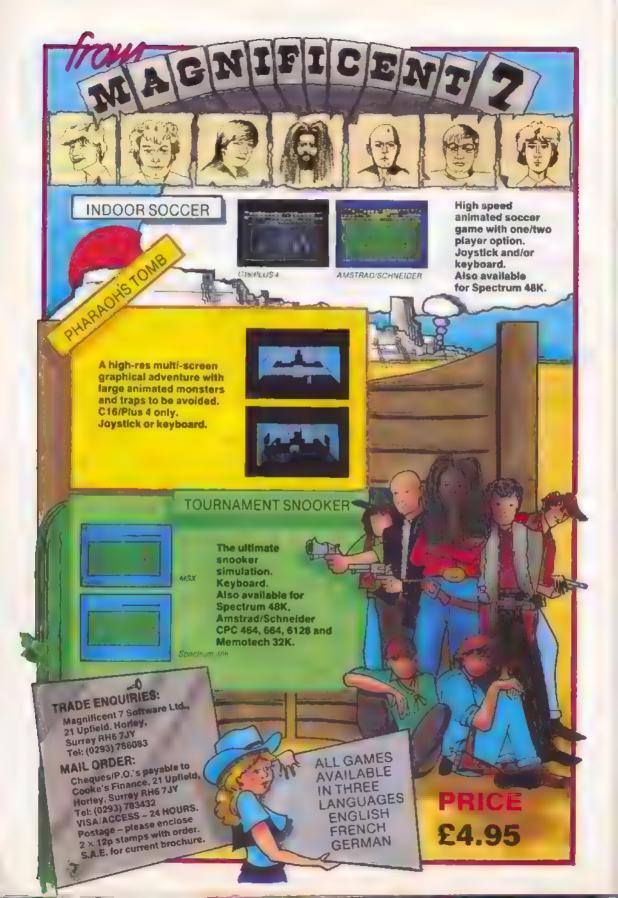

When a second CBM type cassette unit is connected to this board it will make When a second CBM type cassette unit's connected to the board it will make back up opine 30 easest to based software, including Turbs. Fost loadins. Machine code and/or Basic and Data Files. Yorv user friendly the back-up copy is made on the second cassettr unit while the original is leading on the first. No additional software is needed, thice just 18,95 plus p.b., Why pay more? You have read the rest, now buy the best. Need we say more.

#### RESET CARTRIDGE .... FOR THE COMMODORE BA ....

Simply assert this Reset Cartridge into the cartridge port of your 64 and you can reset all memory treatent programs, which includes all programs that standard reset switches fail to reset. This Reset Certridge really works on ALL programs. Priced at £7.95 plus p&p

Add 55p påp UK, Europe add E1.00 and elsewhere add £2.00. For Recorded Delivery in the UK add 25p centra or add fill 25 extra for Registered Post abroad. Send a cheque/PO, or send a stamp for full details to:

CLARK KENT SOFTWARE, 26 NORTH CAPE WALK, DAMESHOLME, CORBY, NORTHANTS NN 18 900 For angeleins phase ring (9536) 742822

### MORE NEWS FROM LLAMA LLAND (HANTS)

### COLOURSPACE DEVELOPMENTS

A number of versions of our unique light synthesiser are now available. They are:

# second-generation version

\* for the BBC

for the ATARI'S bit 48k machines

7.95 (tape) £7.50 (tape)

and NOW ON DISC., 211,95 azziing, hypnotic, 16-bit, third-generation version

for the infinitely wonderful ATARI ST 520

allows the user to create, interactively, dynamic light displays using the ATARI's 320 x 200, 512 colour graphics. Do if to music, your eyes won! believe your ears......

#### CBM 64

Jeff Minter's latest '64 game, IRIDIS ALPHA, has emerged from its chrysalis and looks beautiful. It includes yet another innovative game structure and like all of Jeff's work it has to feel right - he writes 'emitor

The game is made up of two different and challenging aubgames, and features a nicely-animated and distinctly cute droid that can scuttle jump, take off, even transform itself into a fast fighter craft with, suitably loud and deadly laser cannon.

For those who like a little subtlety in with the shooting, this is going to be a blast with class...

27:50 (tape)

### VIC 20

Message to owners; DON'T THROW IT AWAY!

VIVA VIC, a collection of eight LLAMASOFT games for the VIC 20 s now ready.

The contents range through ABDUCTOR and GRIDRUNNER, to METAGALACTIC LLAMAS and the amazingly fast HELLGATE. Many the games are not available now commercially, and we feel we are doing everyone a favour, including ourselves, by publishing them in this form. The package includes Jeff's historical comments and comprehensive instructions.

GREAT VALUE AT 66.50 (tape)

#### **化安全电池电池安全电池电池电池电池电池电池** COMIN' SHORTLY

#### **CBM 16**

We have now had MATRIX the enhanced and expanded successor to the famous GRIDAUNNER, re-written for the '16. It includes all the features of the original version, including that traitorous humanoid, the SNITCH', and the hallucinatory camels. C16 MATRIX features and even faster fire-rate than the original. Strategic decisions and rapid reactions become more and more essential as the game progresses... A similar conversion of LASERZONE, the hectic and challenging game. which was such a notable success on the Vic 20 and the '64, will also appear shortly, it features a unique and ingenious method of joystick control. As you learn the skills of laser fire, things get rougher and tougher for those pesky aliens! Great sonix too.

and yonder, still before us, lies., the AMIGA.

wo more new commands for your Spectrum Toolbox this week – an On Error command and a Block Delete facility – all in glorious machine code

Error is a run-time facility and should be the first line in any program in which error trapping is required, together with the value of the line number to which control is to be transferred if an error is detected.

There are two entry points # Error. Randomizo Usr 64163 is equivalent # 'On Error Gosub', as a Return can be made to the statement subsequent to that at which the error occurred.

Randomize Usr 64167 is equivalent to On Error Goto as no record of the point at

# TOOLBOX

by Paul Murray

which the error occurred is kept. The line number which control is transferred is entered in Basic, using the variable LIN. Thus:

10 Let LIN= 1000 Randomize Usr 64163 is equivalent ■ 10 On Error Gosub 1000; whilst 10 Let LIN= 1000: Randomize Usr 64167 is equivalent to 10 On Error Gota

In order to permit different courses of action to be taken for different errors, a record is kept of the code at the error which occurred This may be obtained by Peeking to 64283, which is the memory location at which the code is stored. The error codes are as shown below.

- 1. NEXT without FOR
- 2. Variable not found
- 3 Subscript wrong
- 4. Out of memory
- Out of screen
- 6 Number too big
- 7 RETURN without GOSUB
- II. End III file
- 10. Invalid argument
- 11. Integer out of range
- 12. Nonsense in Basic
- 13. Break-CONT repeats
- 14. Out of DATA
- 15. Invalid file name
- t6. No room on line
- 17 STOP In input 18 FOR without NEXT
- 19 Invalid I/O device
- 20 Invalid colour

- 21. Break into program
- 22. Ramtop no good
- 23. Statement lost
- 24. Invalid stream 25. FN without DEF
- 26. Parameter error
- 27. Tape loading error

Note that error codes II (OK), and 9 (STOP statement), are missing. This is because the program does not treat these as being errors and allows them through.

Delete detetes a block of lines between specified timits. The limits of deletion are entered in Basic using:

FL - First Line, Lower limit of deletion, LL-Last Line, Upper limit of deletion.

For example, if

Let FL 40° Let LL = 120° Randomize Usr 64493 is entered, then all lines in the range 40 to 120 inclusive will be deleted

Don't lorget, to install the routines, you'll have to use the Basic loader program, printed in the April 10 issue. However, for the faint hearted, cassette copies of the whole suite of programs can be obtained from Paul Murray, for the sum of £3. Write to 5 Hanham Mills, Bristol B15 3NU.

# SUBMARINE

by Daniel Bishop

o carry on from last week, beware of being too close to the sub. It may try te defend itself by firing torgedoes at you, if you are unlucky this may result in the destruction of your ship. Otherwise, the torpedo trails can give you a valuable clue, since they emanate from the location of the

Another clue which you may be lucky enough to spot is the periscope. When the sub & just below the surface it may upperiscope However, the wake caused by the periscope being out of the water is not very noticeable so you need to have sharp

As well as moving about as your ship may do, it may help you to know that the submarine alternately rises to the surface and then dives to the sea bed. The sub only fires torpedoes when it is just below the surface. But II may then dive very guickly to avoid your depth charges, if its torpedoes fail to destroy your ship!

Your mission is, of course, to destroy the submarine. When you think you are close enough to the sub, fire a depth charge by pressing the fire button or by pressing the spacebar. If your charge III successful you will hear the sub blowing. Otherwise you are free to lire another, if you can spare it!

Note that you will have to be almost upon the submarine to IIII sure of getting it. Also, the deeper the sub, the less effective are your depth charges.

The submarine may also ram your ship In a desperate bid to destroy you. This is, however, a rare occurence, unless you continually cruise just above the sub!

To receive your briefing, press B at any time during the game. You will be given precise orders from the Admiral, plus information on which keys to use III control

When the game ends you may lose or gain points, depending on the outcome

he Disc Monitor program is in two parts, the first being composed mainly of program messages and counters, etc. whilst the second is the run code itself

Save each part as a Basic listing (as a

# DISC MONITOR

by D Baker

precaution) prior to loading and running Parl. One. (printed this week). If the checksum doesn't liag an error Load and Run Part Two (printed next week) - this takes approx 20 seconds to run. If all is still OK, the program can be saved as a block of code from 49152 to 51976. (\$C000 - \$C808) via a monitor or similar. The program is started via a \$Y\$ 51484 (\$C91C) command.

Assuming you have successfully toaded and started the program, you will see the current Disc Status and 'Menu' in the bottom part of the screen. The Disc Status will update regularly during program execution, informing you of any errors

Commands are entered via the Function keys, and are as follows:

(Ft) Load - You are prompted for Track then Sector, enter the required values in decimal, pressing Return as each is entered. The requested block will load into 1541 Ram and 054 Ram. The first page of the block will be displayed. (The display and paging are described later).

(F2) Chain Load - E you wish to 'step

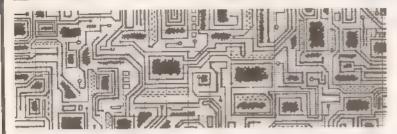

through a program or file, block by block and don't want to keep entering the values for the next Track/Sector, you can load the next block via F2. If you reach the last block and try to chain again, an end of program message is displayed

(F3) Page – As described later, only half a block is displayed at a time. This key 'toggles' between the two halves to display the other half.

(F4) Save Block - This saves a displayed block to the Track and Sector it was loaded from. (Can be used to transfer disc to disc, if you know your way around the Ram etcl). (F5) Printout - This dumps a whole block to the printer, giving Hex and ASCII as per the normal display format.

(F6) Backup - This is a no frills, six pass disc copier that produces a 100% copy of the original it does not reproduce commercial protection devices, read errors, etc, and is only designed to copy unprotected software, prompts tall you when to swap discs. To abort a copy, press (A) when the 'Insert Source Disc' message is displayed.

## PRINT OUT

by Barry Ashfield

the excellent Brother EP44 typewriter printer has proved remarkably versatite for use with QL. Not only is it a quality printer for use with program listings or the Quill package, but II can also be used as a portable typewriter. Letters or programs can be typed into the EP44 on the train or in the bath it you like and can be transferred to the QL at your leisure.

Basic programs can be stored indefinitely in the printers memory to be run by the QL when required in fact for short Basic programs, it is often laster and more convenient to load them from the printer rather than the microdrives. The printer will also act as an RS-232C terminal with 2 way communication between printer and committer.

Firstly let's deal with connecting the two together. The Sinclair RS232 lead works fine with the EP44, but it is possible to make your own lead up if you can get hold of the special modulator. The connections

are:			
QL #4	ir1	25 pln "l	D" plug
1	GND	SG	7
2	TXD	SD	2
3	RXD	RD	3
4	DTR	ER	20
5	CTS	10	5

Now set up the EP44 by switching the mode switch to Terminal. The display will now read Off Line. Press the I Mode key and the Baud Rate will be displayed. Use the Return key until Baud Rate 1200 III displayed Pressing I Mode again will accept this setting and invite you to set Bit Length next. Continue using the I Mode and Return keys until all the settings are the same as List 1. Press the Cont key and you are ready to print. Turning off the printer does not affect these settings so you only have to do this once.

For direct printing from the QL to the printer, type in Baud 1200. Open#10, ser1c and press Enter. Anything you now Print to #10 will now be printed on the EP44. If you wish to print a '£' sign use Print#10, Chris (156) or use Ctrl + Shift+, to give the Beta symbol which # printed by the the EP44 as a '£'.

To print a program listing, just type in Lis#10 and the program will be listed on the printer You must Close#10 before switching off the printer or the QL will lock up. If this happens just turn the EP44 on again and Close#10

The only problem with using the EP44 with Quill is printing the E sign correctly and using the underline facility.

To set up to give normal printing of all

characters, set up the EP44 as in List 1 and then Trun the Install Bas program on the Outli cartridge. Keep the Outli cartridge in Drive 1 and enter the parameters in List 2. Some difficulty may be encountered on setting up the Translate1 which ensures correct printing at the 'E' sign and the following procedure should be used.

I) use cursor keys to move up/down to Translate!

2) use cursor left or right to give change item mode

3) Type 96, 156 and press enter

4) If all is correct Translated should appear as in List 2

Repeat the procedure for Translate2 and 3 which print the zero and copyright symbols. When all is correct press F5 to install the printer driver and you can reset the QL and run Quill. Note that the superscript and subscript modes witl be ignored with these settings.

Text can be sent very easily from the printer to the QL. Use the same settings on the EP44 as and on the QL just type in Baud 1200. Copy senter To sen Press Enter and with the EP44 in terminal mode, you can type directly on the QL's screen. If you have any test stored in the printer's memory, press the key marked + Itext and it will be sent to the screen also. To end transfer press Code + Z on the EP44. Of course you can't do anything much with this except print on the screen.

If you have an editor (such as the one

#### BASIC program A

## Programming: QL

supplied with the Adder Editori Assembler text can be sent from the printer's memory to the editor by just giving seric as a filename and pressing + Hext. When the Text End message appears on the printer again, press Code+ Z to send the EOF marker and end transmission. The Baud rate must be set to suit the printer (usually 1200) before attempting any transfer of text.

Text can also be sent from the printer to a Microdrive file and then imported into Quill, in fact this article is mostly written on the EP44 in Store Text mode and then later transferred to Quill for final aditing and printing. The file is be imported must have

the extension - exp or Quilt will not import

Set up the printer as in List 1 and place a suitable cartridge in Drive-1 then 1) Load the Basic program. A but don't

run it yet. 2) Have text ready in printer's memory.

3) Put EP44 III Terminal mode and press contand + /fext

4) Run the Basic program and the text will be sent to mdv1\_

ep44 exp

5) When the Text End message appears press Code+ Esc to close the fite. Do not use Code + 2 as this will stop with an EOF

error and leave the file open. Running the program after you have sent the lext ensures that the unwanted control characters are not sent.

6) Now load up Quill and place the cartridge with the export file in drive 2.

7) Select the Files command and then the import option and enter the full filemane mdv2\_ep44\_exp and the text imported to Quill and can be edited as required and saved as a normal document.

As far as Basic programs go, if the text stored in the printer is in the form used by a Basic program (with line numbers), it can be loaded and Run quite simply with: Baud 1200 : 1run seric, and press + /text send the Basic program.

Code+ Z ends the transmission and runs the program. If you have made any errors, they will be flagged by the QL and the program will stop at that line. This is faster than the microdrives for short programs, so it is possible to store often used gragrams @ up to 3726 bytes in the printer for instant recall

Finally, to use the EP44 as a terminal, first set up the printer as \$\infty\$ list 1 and then trun Basic program ~ B. Anythling typed on the QL will be printed on the printer and characters typed on the printer will be printed on the QL's screen. The program takes care of the 'E' sign to ensure normal printing Code+ Esc on the printer ends the program.

# FOR YOURSELF

 This book is an ideal companion either as a practical introduction to the C language or as an aid to the quick development of a wide range of applications.

 The theme of the book is data-handling. and methods of programming data-handling routines in C. Topics covered include control routines and menus, interactive data entry and text editing, screen format and form generation, error handling, useful data structures, sorting (both in memory and on disk), indexing and retrieval. Full testing routines are included for all the programs in the book.

## Programming: Bytes & Pieces

### Anyshape on Amstrad by Jon Tarrant

This programme in a simple demonstration of the graphics power of DR LOGO (as supplied with the Amstrad disc systems). If defines a routine, called anyshape, which can draw any regular two dimensional figure.

When the routine is run it requests an input for the number of corners (sides) the shape is to have. Numbers between three and ten are most suitable; numbers greater than about 20 give essentially circular figures and are therefore of little interest.

All the shapes are drawn the same size by scaling the length of individual sides to lit the shape within a circle of radius 120 graphic units.

Incidentially, it is probably easiest to type-in the program using the CP/M editor ED.COM (ensuring that the filename is ANYSHAPE.LOG)

It is then possible, of course, to enter, load "anyshape, once Logo has been installed. This delines the routine which can then be run by lyping in the word anyshape.

### 80 Column view on BBC B by Andrew Homer

There you are, sitting at the keyboard writing away III your heart's content using Wordwise (40 column mode) and then it hits you. I wish I could preview section of my text III 80 column mode. Thave you ever wished you could preview sections of large Wordwise files in 80 column mode instead of 40 column mode?

Well, if you have, help is at hand for disc users, with this short segment program

All you do is position the cursor under the last line III text you want III preview, check that F0 is set to 'Insert', and run the program.

The text will be displayed in 80 column mode regardless of the size of the main file. It will also be displayed im conveniently sized pages which can be scrolled by pressing the spacebar. An additional advantage im that a backup copy of the whole text is stored in "FL" each time the program is used.

The total number of lines previewed is set by L% and the amount of text displayed between pauses is set by S%. These can be varied to suit requirements.

In order to use this utility you must have sufficient space for two extra files on any disc used with the program. If the main text is lost, it can always be recovered by loading "FL".

The program has been developed a BBC B, but there is no reason why it shouldn't be OK for a BBC B + or a Master—and all existing versions of Wordwise.

## Programming: Peek & Poke

# Disc drive advantage

Michael J King, of Newlands Road, Bently Heath, Solihull, writes:

am intending to buy a disc drive for my Commodore 64 and I understand its advantages over tapes for loading adventures and such in parts. What I am uncertain about is whether there is any advantage with games like Eille, and Way of the Exploding Fist. I realise that they will load quicker from disc, but is this the only advantage?

A For games this probably is although they may load a little faster, there is not much difference between a disc drive and one of the tast tape loaders, apart from reliability and being able to seve your status quickly.

If, however, you want to do any programming on your 64, or use it for word processing and other business applications, then the advantages of using discs become far more obvious.

#### Drastic measure

Mike Williams, of Craigmont Drive, Edinburgh, writes:

On reading Mark Groom's Q letter about his Amstrad CPC64 tape problem, I thought my solution might help. I purchased my 464 when they first appeared and programs stopped loading about two months ago. The output was sounding wobbly - "flutter" to hi-fi freaks. After a little poking around Inside the machine, I decided that the drive belt was tired. As a temporary measure, I cut about 8mm out of it, and super-glued the ends back

tonether

Atthough I don't use the cassette much now that I have disc drives. I don't see why this solution shouldn't work in Mark's case as I now have no problems, even with flash loaders.

A Before trying this rather drastic measure, it always helps to try cleaning the tape transport system. The main part that causes flutter is the capstan (the little rubber wheel and vertical spike) which putts the tape through at a constant speed. Use a cotton bud dipped in some solvent (methylated spirits are best) to scrub the capstan and spike to remove any accumulated grime, and then make sure any excass cleaning fluid is removed.

White you're at it, it im also wise to clean the record and play heads in the same way When you try the tape again, it should be much improved.

If you do try Mike's solution, make sure your Amstrad is out of its guarantee, otherwise you will almost certainly invalidate it

## Which computer?

■ Cassidy of Stirling, writes:

Q1 am contemplating the purchase of a computer and seek advice. My requirements are fairly straightforward: I require a computer which can play a range of games, for both my young family and myself to learn about computers through "tun".

The Amstrad CPC6128 or the Commodore 128? Would you recommend either of these, or do you see any other mechines suited to my needs?

A Both the 6128 and the Commodore 128 would be suitable. While the Commodore's range of games software is arguably the best there is, games are being written and converted to the Amstrad all the time.

One consideration in your choice may well be price - a 6128 with a colour monitor costs 6399, and you get a built-in disc drive as well as the monitor and CPU in the price. The counter to this is that disc-based Amstrad software is still not as readily available as tape versions. The C128 costs £269.

but no monitor or disc drive is included in the price.

The machine with the widest range of entertainment soft-ware is the Spectrum, but the Spectrum will almost certainly not be available in its current form for much longer, following Amstrad's takeover if the product.

#### Spectrum repairs

Rafferty Raf. of Casson St, Whitechapel, London, writes:

My Spectrum broke down several months ago and I have had to send it ill a couple of repair shops. Il was returned unrepaired. I then took it to a repair shop who said that it would cost about £35 to fix. Since a new Spectrum ill about £60, I declined. They also said that the chips, including the CPU, would need to be replaced.

I have tried to get in touch with Sinclair several times but the phone has never been answered. To lop II all, my friend's Spectrum Plus, which I use, has also broken down.

I would also like to know if there are any other computers around at about £100 that have good quality sound and graphics. I would use it mostly to play games.

At don't know what you've done to the poor machine but it sounds a little drastic. It is rather untikely that all the chips have broken down, although Spectrums have been known to crack-up completely for various reasons. The quoted cost of fixing seems a little high—there are many companies in four classified section quoting repairs for less than \$20\$.

Getting in touch with Sinclair is now rather a waste of time since the Amstrad takeover and the best thing to do would be contact the new owners. Unfortunately, Amstrad is still trying to sort out its Sinclair trying to sort out its Sinclair affairs, which should take around six weeks, and it recommends that laulty machines should be returned to the retailers.

Amstrad is, however, currently talking to firms about repairing Sinclair micros so the best thing iii do iii read the news pages, and wait tor developments.

Probably the best computer

bargain for playing games on is the good old Commodore 64. Even considering that if is now a bit over the hill, there is still an awful lot of games software available for it.

### Strings on the 54

Martin Lanni, of Valley Drive, Kendal, writes:

Q I own a Commodore 64, and am trying to write a program which accesses a file containing several strings and prints them up on screen. However, I am experiencing trouble as I keep receiving a "String too long error". I am using casselle.

A Imagine you want to keep a fist of five items in two parts, perhaps a name and a number (as in a phone directory, or a stock list). The best way to handle this is to set up a two-dimensional array. Call the array LS\$(n, 1) holds the name, and LS\$(n, 2) holds the number.

The program listed below demonstrates an example of this technique if you run it, you'll be asked to enter five names and numbers. Following this, you'll be prompted to put a tape in your recorder. The program then writes the content of the array III the file.

After this, rewind the tape and the life will be read back into a checking array called CH\$()

The use of C\$ as a delimiter is the key to avoiding the "String too long error". And to identify strings in an array, simply loop through, comparing the array content with a target string until a match is lound.

### **Communications**

# Setting up on one's own

David Wallin sifts through his mailbag and answers your Bulletin Board queries

recent article about the history of Viewdata. I omitted to mention the main source of the information; it was, of course, the Spectrum Micronet Book, by Alan Giles, published by Melbourne House. Sorry for leaving you out!

One topic which many letters come to me about is the Protek 1200 modem. It's altracting a lot of attention largely because it's only £15, which includes Prestal and User-to-User communications software and leads for either the Spectrum, BBC or Commodore. The modem works at 1200/1200 and 1200/75; however, it's only an acoustic device, so you plug the phone into suction caps, but at £15 you can't expect that many features.

Protek Computing, which made the modern, has gone bust and its products are being sold off by Future Software at 4 Rowanburn, Canonbie. Dumfries, Scotland.

If you want a very cheap introduction to communicating, then in my opinion this is a good way to start.

Next, I've been told of two new Bulletin Boards by their sysops this week; they are Swindon (TeC and Techno Fresh Systems. Swindon iman information technology exchange centre Bulletin Board, of which there are a large number in this country it runs using the CommoniTet package, which means it is a Prestel compatible board and to access it you need to have Vlawdata software. Therefore it's 1200/75 baud. The hours for this board are 1530-0900 Monday to Friday, and 24 hours at the weekends. The number is Swindon (0793) 610200.

In the letter the sysop said that to find out what's on it you'd have to call and find out for yourself; all he said was 'it has something for everyone', so I guess you'll have to give it a go.

#### On-line adventures

The other board, Techno Fresh Systems, is run by Llew Dickinson in Wates. It's only 300/300 baud but Llew hopes to get 1200/75 on-line soon as well. One interesting feature of this board III that it runs competitions for users, with software and books as prizes.

As with many boards there is loads of free telesoftware indownload and mess about with. Most of this was uploaded by

users of the board in the past month, when the board was set up. There are lots of different sections as usual and there is also an OXO game – a user versus Llew game of houghts and crosses. Liew also hopes IIII have some on-tine adventures running soon as well. Lastly, the times and number, 24 hours and 0570-423082.

I have received a letter from a person who goes by the name TandoR' about MUGs. A MUG is a Multr User Game; MUD is probably the best known example.

#### Demo account

According to ZandoR, atias Colin Curtess, the MUG, called Gods, is 'really fantastic'. Well, he would say that, wouldn't he. It is run by Lap of the Gods Ltd; the personae of the people who run the MUG are Tiger. Tiger, Major Malfunction and Lucy (which at least sounds vaguely normal). Gods costs £23 to register with which is, in fact, cheap as MUGs go. It runs alongside a Bulletin Board run by Tiger Tiger, on 05-994 9119, 8 bits, no partity.

When you dial this you get the option of either using the BB, which is free, or going to Gods, for which you need to have real/stered.

There may be a demo account, which you can use to see if you want III pay for full access, but ZandoR wasn't sure of this. Why not give it a try? III you want to contact Lap of the Gods Ltd for more information, the address III Gods, Lap of the Gods Ltd, 168 Portobello Road, London W11.

Another letter about starting a BB comes from B R Cossins, who has a tip for BB users when dialling a board. If it rings more than three times you may as well hand up. All boards should answer in less than three rings, so ill you slav on the phone you will be likely to get a vocal answer, and probably a wrong number at that. Mr/Ms Cossins also wanted help starting # 88, especially with regard to the best micro on which to run one. I would go for a BBC, partly because there is cheap software readily available for running a BB, and also because setting up a BB on the BBC, with your own software, is dead easy. More on that in a few weeks

The next part of the letter was about disc size, 100K will do but a 100K BB will, to put Il politely, be pathetic! A good board needs a minimum of 400K but 800K is probably best to start off with Most bulletin boards on-line have at least 800K; if they don't it shows, because they lack many features, such as Sigs, messaging and telesoftware, all of which use a great deal of disc memory. The Micrognome, for example, uses just over three megabytes of disc space, which is 3,000K. Other boards run with Winchesters, which store from 5Ms to 20Ms. For a really good board at feast 1M would be used.

Also there is the question of Ram discs; users of the Amstrad PCW range of micros will know about these. A Ram disc consists of Ram chips, 32K, 64, 112K or whatever, set in separate disc drive format. On the PCWs this appears as drive M. The advantage of a Ram disc, over a lipppy or even a Winchester, is that the time taken to access data is incredibly fast, because there are no motors to start and stop.

With a Ram disc, things like the user log could be stored on one and access would be almost instant. Anyone who uses Buffettin Boards on a regular basis will know how long it takes to check the user log liftind out who you are, one or two units of phone cost, which is five or ten pence a time, it all adds up.

### Save money

Lastly, this week, phone bills. Liew Dickinson pointed out that it is really trustrating if people do just turn off. J W Hughes pointed out that this doesn't even save you money. It is a bit complicated, but I'll try III explain.

Let's say that at the time you're on-line, you have five minutes to a phone unit. If you are on line for just one second, it costs one unit (5.75p plus VAT), the same as if you are on line for four minutes, 59 seconds. You are charged when you enter a band of time, not at the end of it.

So if you just break the line you are wasting money that you have already spent, not saving it So don't just hang up, it's a waste of money and rude. Thanks to Mr. Hughes for pointing this out.

If you have any queries, tips or comments to make about any aspect of micro communications, David Wallin would love to hear from you.

Write to him at Popular Computing Weekly 12-13 Little Newport Street, London WC2H 7PP.

## Competition

# Get your share

And now the moment you've all been waiting for - your chance to grab a share of £2,000-worth of great hardware and software. Over the last three weeks we've presented you with three wordsearch grids, each containing six words, so by now you should have before you 18 words related to microcomputing. Remember, words are definitely computer-oriented (they may cover hardware, software, perhipherals, languages etc) and are at least four-letters long. Here's where the fun starts

Competition Rules

- Competition Multie

  1 All entres multiple received by 5pm. Finday, May 23, Proof of postings will not be experience as proof of receiving the pattern must be made by the accompanying form at you do not want to cut your same of Popular. Competing Workfy you should use a photocopy.

  3 The purson will be a warded to the senders of the first 20 of the purson.
- all-Cortact addition
- all correct efficies

  A fir the event of any dispute, the editor's deuteron is final
  and no correspondence will be entered vite.

  B Winners will be entired by your A hard all prize-kinners
  with also the published in Probular Computing Weekly,
  being dated May Wi-Jone 5.

The initial letters of these 18 words form an anagram of a common computing phrase containing three words.

grids were given in order, so the six words from the first grid provide the first six letters of the phrase, etc.

To enter, till in the form giving all 18 words, and the resulting anagram, and send it to the address below. Closing date for entries is Friday, May

Prizes will go to the first all-correct antring out of the hat

The 18 words are:	Entry Form

#### **AMSTRAD**

Program Redhawk Type Adventure Machine Amstrad Price £8.95 Supplier Melbourna House. 60 high Street, Hampton Wick, Kingston upon Thames, Surrey KT1 4D8

Program Equinox Type Arcade Machine Amstrad Price 59.95 Supplier Mikro-Gan, Unit 15, The Western Centre, Western Road, Bracknell, Berks RG12 IRW

quinox is one it those games that has little by way of originality but is so well programmed and neatly presented that one feets well disposed towards it. Although Equinox reminds me of half a dozen arcada games I've already seen, a couple by Bubble Bus, for example it looks spectacularly colourful on the Amstrad and the neatness of the sprite design makes for a very appealing game.

Plotwise - well, it's that "find the eight radioactive canisters and destroy them, use your teleporters, smart bombs dynamite and other wacky oblects" time again. The screens are check full of bouncine aliens and you have only rather pitiful laster with which to blast your way through to the next level. The cannisters hick somewhere on each level and must be disabled by chucking them through the disposal chute, you need to teleport to the next level and for that you need a pass card.

The graphics are excellent, here and there there are some enormously large detailed objects like one-eyed monsters which match anything previously seen on the Amstrad for beauty in design if your appetite for collect and blast games is inexhaustible you should rate this one

#### COMMODORE

Program The Beaks Thology Type Arcade Machine C16 Price £8.95 Supplier CRL, CRL House 9 Kings Yard, Carpenters Road, London E15 2UD

Program Galectic Patrol Type Arcade Machine Commodore 64 Price £1.99 Supplier Mastertronic 6-10 Paul Street, London EC2A 4JH

Program Borrowed Time Type Adventure Machine Commodore 64 Price \$14.95 Supplier Activision Activision House 23 Pond Street, Hampstead London NW3 2PN

Program Bump Set Spike Type Simulation Machine Commodore 64 Price £1.99 Supplier Mastertronic as above

### Cave Adventure

Program Very Big Cave Adventure Type Adventure Machine Commodore 64 Supplier CRL, CRL House, % Kings Yard, Carpenter's Road, London E15

he Very Big Cave Adventure is my kind of game. It's a genuinely lunny (as opposed to embarrassing) parody of Colossal Caves, and created by the only software house ever be based on a girls school for grown-ups viz St Brides

The connection between The Big Cave Adventure and things girlish is only that your leader in the expedition is Trixie Trinian - prefect at St Brides and all round good egg. Ill Brides claims that the Very Big Cave Adventure was the original before the other original adventure (it has merely been hold back for reasons of taste) - now it is unleashed on the computer game buying public.

The graphics that illustrate most of the scenes are so-so, the parser is fair but no more but all of this is beside the point.

The point is that there is a reasonable joke me every screen and every so often, absolutely brilliant ones. Any game which has as one of the sofutions to its puzzles.

lobbing a bomb at a bull trather than those complicated affairs where you have to get 12 different objects, then assemble them in a certain order, then say the magic word. ) It all right with me

There are specialised jokes for people familiar with the Crowther-Woods original and jokes for the more general computer fan (a sharpened ZX81 is one key object). A mammoth apool and it works - I've actually been playing it more intensively than any other adventure I've seen recently. Quite cheap too

Program Hocus Focus Type Arcade Machine Commodore 64 Price 28.95 Supplier Quicksliva, Liberty House, 222 Regent Street, London W1970B

Program Pilgrim Type Adventure Machine Commodore 64 Price 57.95 Supplier CRL, CRL House, 9 Kings Yard, Carpenter's Road, London E15 2HD

Program The Berks Trilogy Type Arcade Machine C16 Price £8.95 Supplier CRL Group PLC CRL House, 9 King Yard, Carpenters Road, London £15 2UD

Program Vidcom 64 Type Utility Machine Commodore 64 Price £4.95 Supplier Media Matters. 23 - 25 Castlereagh Street, London W1H 5YR

#### SPECTRUM

Program Astro Cade Type Arcade Machine Spectrum Price £4.50 Supplier S Green, 49 Beaumont Road, Halesowen, West Midlands

### New Releases

ompilations are fundamentally not exciting After all, they usually consist of well known games about which there is little new to say Nevertheless all compilations are not the same. There are the 'never mind the quality feel the length' of tapes like Argus's 30 Games and there are the half dozen 'but they're goodles' Off the Hook type packages.

Astro Cade lills the gep by being half a dozen very dodgy garries, but it is relatively cheap at £4.50 However, the tilles are cheap in more ways than one: these barely reach even early Mastertronic quality and are so unoriginal the only good thing to be said about them is that \$\overline{\text{said}}\$ least you''! \$\overline{\text{said}}\$ ready know how to play them.

The games are Simeon, the match-the-colour-sequences game so often seen as a listing in magazines; Caverns d'or, a simple cavern-based monster bash; Bomber, which is, well, Bomber the 'trustratingly addictive" ie, very boring, demolish-the-buildings effort; Zombie is about running around and shooting; Luna Rover is scrolling landscapes and jump the potholes and kill things except that the graphics look like a ZX81, and Allen is more space shooting

The best of the games are fairly bad, although you can't call it a rip off at the price. Even so, I'm not sure games like most of these here are even worth the loading.

Program Castle Thade Adventure Type Adventure Machine Spectrum Price 25:00 Supplier Spectrum Adventure Exchange Club, 4 Hilmarton Lane, Carluke, Lanarkshire ML8 5RT

Program Hocus Focus Type Ar-

cade Machine Spectrum Price £8.95 Supplier Quicksilva as above

Program Merhownie's Light Type Adventure Machine Spectrum Price £2.00 Supplier K Soft 118 Kingsway, Ossett, W Yorks WF5 8HQ

Program The Spore Type Adventure Machine Spectrum Price £2.00 Supplier K Soft as above

Program Valkyrie 17 Type Adventure Mechine Spectrum Price 57:98 Supplier Ariotasoft, 68 Long Acre, Covent Garden, London WCZE 9.3H

alkyrie 17 is not a new program; it was originalty released by Palace last year is some acclaim but not much effect. Now it has been resurrected at Arrolasoft.

With Valkyrie 17 the art of the game is \$\mathbb{B}\$ in the plot and wit The graphics are reasonable, the text analysis fair, but those alone would not justify the game's existence Sentences are single statement only, verb-noun in essence. The graphics are quite detailed and guickly drawn.

To the actual game: the plot concerns a secret Nazi device that is in danger of falling into the hands of a shadowy organisation known as Valkyne 17. You play a sort is secret agent led into the mysterious affair by a series of strange tolephone calls (present as an audio track on the b-side of the cassette). A dossier on Valkyne 17 arrives and you are led to the Hotel Gitz on the shores of take Bruntz.

The whole thing is a very tongue in cheek, full of low voiced blands some of them Aryan males, rather than

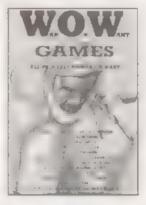

ternme fatales (though some are both) - and people speaking in heavy German accents. There are references to movies from the 40s and Philip Marlow style spy books. Indeed the game is a sort of tribute-come-parody of the spy genre.

Valkyrie 17 is exceptionally literate and withy in the 'slight smile rather than the 'hysterical mirth sense For a rereleased game I think it could have been cheaper, but adventurers who like their adventures with style will find much to enjoy here.

Program Wow Games Type Arcade Machine Spectrum Price 69.95 Supplier War On Want, Three Castles House, 1 London Bridge St. London SE1.9UT

here are many compilation lapes around, not a lew designed for charitable purposes, but nevertheless Wow Games deserves a plug. WOW is War on Want and it has produced a 14 game collection for the Spectrum

They are: Spectrum Chess II. Bug Eyes, Pedro. Winged Warlord, Mr Freeze. Headbanger's heaven. Wizard's Warrior, Helllire. Hunchback III. Horace and the Spiders Xavier, Rupert and line toe Castle, Cybertanks and Dr Franky and the Monster OI those there are a few gems, hall a dozen goods, a few more okay and one or two absolute stinkers (Pedro gets my vote in this category)

The tape is worth while for anyone into basic arcade games - like Bug Eyes and Dr Franky - Ihough there are some more complicated affairs like Rupert and the toe Castle which has never actually been released before Surprising really, since it's jolly good

Certainly worth £9.95 of anyone's money, this compilation is one of the more interesting ones around at the moment

Program The Planter's Guide Type Utility Machine Various Price £14.95 Supplier Phoenix Publishing, 14 Vernon Road, Bushey, Herts WD2 2JL

Since I'm always pro any program that is out of the mainstream, I feel The Planter's Guide deserves a mention it's a database plus a book with correlated information on over 1000 plants

Now I know this doesn't sound very exciting, but for those people who occasionally manage to leave their computer screens and venture out into the garden, it's rather useful. The basic idea of the program to help you choose plants appropriate to the soil and light conditions for any particular section. If the gardon.

It works both ways - either you can set up your growing conditions and see what suggestions the database comes up with or you can consult the accompanying book to lind a plant you like and find out what conditions it requires. Olten these sort al specialist programs are very dodgy indeed full of bugs and bad presentation, but The Planter's Guide is excellently put together with neat displays and well error trapped You get versions for Amstrad, BBC Commodore and Spectrum on the one tape and there are full instructions on saving your edition to disc or microdrive

The Planter's Guide is a little expensive **E** 14.95 but could be invaluable for the ardent gardener

# NEXT WEEK

If you liked the extra reading provided by this week's special supplement, then don't miss next week's issue – because there'll be another one.

This time, the supplement will be looking at all aspects of the educational potential of your micro – an area often neglected in the consumer press.

#### Mind your Language

A survey of programs designed to improve your French, German and Spanish – how effective are they?

#### Adult Education

You don't have to be at school to learn from the computer

#### Mirrorsoft

A profile on the company that put the Mr Men on the micro

#### Science now

Hi-lech software for the computer age

#### Dealer Guide

A comprehensive nationwide list of specialist educational dealers

Don't miss out on Popular next week
